United Nations A/80/605*

General Assembly

Distr.: General
27 January 2026

Original: English

Eightieth session
Agenda item 148
Administrative and budgetary aspects of the financing of the United Nations peacekeeping operations

Budget performance for the period from 1 July 2024 to 30 June 2025 and budget for the period from 1 July 2026 to 30 June 2027 for the United Nations Logistics Base

Report of the Secretary-General

Contents

* Reissued for technical reasons on 16 March 2026.

26-01035* (E) 170326

Summary

The present report contains the budget performance and the budget for the United Nations Logistics Base at Brindisi, Italy (UNLB), for the period from 1 July 2024 to 30 June 2025 and 1 July 2026 to 30 June 2027, respectively.

During the 2024/25 period, UNLB, as part of the Department of Operational Support (Office of Supply Chain Management) and a close partner of the Office of Information and Communications Technology, strengthened global supply chain operations, advanced digital technology services and delivered specialized technical support to over 91 United Nations entities, including peacekeeping and special political missions, Secretariat entities and agencies, funds and programmes. UNLB managed the strategic deployment stocks, the United Nations reserve and the 3R (return, refurbishment and reuse) programme. It also supported equipment and asset management across the United Nations and provided tailored support to the liquidation of the United Nations Multidimensional Integrated Stabilization Mission in Mali and transitions in the United Nations Investigative Team to Promote Accountability for Crimes Committed by Da‘esh/Islamic State in Iraq and the Levant, the United Nations Integrated Transition Assistance Mission in the Sudan and the United Nations Assistance Mission for Iraq.

During the 2026/27 period, UNLB will continue to leverage its capabilities to serve an expanded range of operational requirements, reinforcing its role as a service provider for a wider spectrum of United Nations system entities, with a primary focus on its foundational role of supporting peacekeeping operations. Efforts will remain focused on fostering greater economies of scale, mitigating operational and safety risks, partnering with missions to design solutions to ensure business continuity and promoting the standardization of tools, platforms and practices.

Core operational support will continue to focus on: (a) end-to-end supply chains; (b) digital technology; (c) environmental technical support; and (d) other key areas, such as occupational safety and health, and training and conference management.

Following a scalability review, a new staffing model (by function, with reference ranges) has been applied to the budget proposal of UNLB for the 2026/27 period. The application of this staffing model would result in the abolishment of 21 posts. Two posts are also proposed for abolishment due to the closure of the Kuwait Joint Support Office, where the Base had embedded two staff members.

Financial resources

UNLB incurred $66.8 million in expenditure for the 2024/25 budget performance period, representing a resource utilization rate of 98.3 per cent, compared with $65.8 million in expenditure and a resource utilization rate of 99.7 per cent in the 2023/24 period.

The unencumbered balance of $1.2 million reflects the net impact of: (a) the increased requirements under civilian personnel, attributable primarily to the retroactive salary increase for national General Service staff in Brindisi, offset by (b) the reduced requirements for operational costs, attributable primarily to the reprioritization of resources to civilian personnel and liquidity challenges, resulting in lower expenditure, mainly under facilities and infrastructure, communications and information technology and other supplies, services and equipment.

The budget proposed for the 2026/27 period in the amount of $55.5 million represents a decrease of $2.4 million, or 4.2 per cent, compared with the apportionment of $57.9 million approved for the 2025/26 period.

The estimates for the 2026/27 period reflect reduced requirements for: (a) civilian personnel, due to the abolishment of 21 posts based on the staffing model, along with 2 posts due to the closure of the Kuwait Joint Support Office, and the application of vacancy rates higher than those approved, offset in part by the impact of exchange rate fluctuation between the euro and the United States dollar, and higher salaries for national staff than in the approved budget; and (b) operational costs, due mainly to a reduction in discretionary costs, including the lower number of planned projects under construction, alteration, renovation and major maintenance, the lower number of communications and information technology equipment planned for replacement, and reduced use of individual consultants.

(Thousands of United States dollars; budget year is from 1 July to 30 June)

The actions to be taken by the General Assembly are set out in section IV of the present report.

I. Mandate, results achieved and planned outcome

A. Mandate

1. In its resolution 49/233 A of 23 December 1994, the General Assembly welcomed the establishment of the first permanent United Nations logistics base in Brindisi, Italy, to support peacekeeping operations. The premises were made available to the Organization by the Government of Italy at no cost. The entity was officially designated the United Nations Logistics Base at Brindisi, Italy (UNLB). The Base was created to enhance the efficiency and effectiveness of field operations by providing centralized logistics support, including the storage, maintenance and rapid deployment of assets to missions worldwide.

2. Subsequently, in its resolution 63/262 of 24 December 2008, the General Assembly approved the establishment of site B, in Valencia, Spain, as a secondary active telecommunications and information technology facility to strengthen operational resilience and ensure business continuity in support of peacekeeping activities. The facility was subsequently designated the United Nations Information and Communications Technology Facility, Valencia.

3. As part of the Department of Operational Support, UNLB is mandated to serve all field missions, all Secretariat entities, and United Nations system entities, as well as to cooperate in developing broader cooperation with regional organizations, in alignment with the Department's mandate under the guidance of the Office of Supply Chain Management, pursuant to General Assembly resolution 72/266 B on shifting the management paradigm in the United Nations and the recommendation of the Advisory Committee (A/78/744/Add.5, para. 44) endorsed by the Assembly in its resolution 78/295.

4. As an operational support provider in supply chain, digital technology, environmental support and other key areas, such as training and conference management, and occupational safety and health, UNLB is uniquely positioned to support clients in the field and at headquarters in fulfilling their mandates. The Base does so by leveraging the advantages of service centralization, economies of scale and its remote support services capabilities.

B. Budget implementation for 2024/25

Supply Chain Service

5. The Supply Chain Service, in coordination with the Forward Support and Deployment Hub and the Global Procurement Support Section, transferred surplus assets from the liquidation of the United Nations Multidimensional Integrated Stabilization Mission in Mali (MINUSMA) to missions. A key innovation during this process was the reallocation by UNLB of open purchase orders, which was also recognized by the Board of Auditors (see A/80/5 (Vol. II)). The Service carried out: (a) direct transfers between mission inventories, with a total acquisition value of $33 million; (b) transfers from the United Nations reserve inventory to missions valued at $15.9 million; and (c) transfers from liquidating missions to the United Nations reserve inventory amounting to $51 million. Support was also extended to the United Nations Integrated Transition Assistance Mission in the Sudan and the United Nations Investigative Team to Promote Accountability for Crimes Committed by Da'esh/Islamic State in Iraq and the Levant for the closure of residual activities, including the preparation of financial year-end documentation and final asset disposition reports. Advance support was provided to the United Nations Assistance

Mission for Iraq (UNAMI) in its downsizing efforts in the preparation of its preliminary asset disposal plan. The Base provided critical trans-shipment services to missions facing delivery restrictions or supply chain disruptions, resulting in cumulative efficiency gains of approximately $1.2 million since 2022/23. In July 2024, UNLB implemented a holistic inventory management approach through the integrated business planning process and processed internal sourcing solutions for 14 missions with a cumulative value of $16.7 million, as reflected in table 1.

Table 1
Internal sourcing solutions for missions
(Thousands of United States dollars; budget year is from 1 July 2024 to 30 June 2025)

Total	**890.2**	**4 343.6**	**2 768.2**	**8 732.5**	**16 734.5**

6. In the 3R (return, refurbishment and reuse) programme, 30 assets underwent refurbishment. Of these, 15 were completed and recertified for reuse, resulting in a potential cost avoidance of $1.8 million, representing 51.9 per cent of the replacement cost (see table 2). This brings the total number of fully refurbished assets since the programme's inception in 2022/23 to 43. During the reporting period, four assets refurbished between 2022/23 and 2023/24 were shipped to the United Nations Peacekeeping Force in Cyprus (UNFICYP) and the United Nations Support Office in Somalia (UNSOS) (see table 3). The status of the 3R programme fund is reflected in table 4.

7. The first phase of a project to refurbish high-value equipment in Africa began with the identification of a certified refurbishment facility operated by the manufacturer of the original equipment in Nairobi. A contract with the selected certified manufacturer to enable the proof of concept was established and signed on 15 December 2025.

Table 2
High-value asset refurbishments completed in 2024/25
(Thousands of United States dollars; budget year is from 1 July 2024 to 30 June 2025)

Type of equipment	*Number of assets*	*Acquisition value*	*Transportation value*	*Refurbishment cost*	*Replacement cost*	*Potential cost avoidance*	*Percentage savings*
		(1)	*(2)*	*(3)*	*(4)*	*(5)=(4)-((2)+(3))*	*(6)=(5)÷(4)*
Heavy engineering and construction equipment	1	51.7	7.6	39.1	44.9	(1.8)	(4.0)
Heavy-wheeled and engineering support vehicles	12	2 553.9	177.1	1 138.6	2 543.6	1 227.8	48.3

Movement	*Amount*
Opening fund balance	4 675.7
More/less:	
Net adjustment of income	211.5
Expenditure	(1 370.3)
Total value	**3 516.9**
Category of expenditure	
General temporary assistance	432.1
Official travel	11.3
Facilities and infrastructure	148.4
Ground transportation	678.8
Communications and information technology	0.5
Other supplies, services and equipment	99.2
Total expenditure	**1 370.3**

Strategic deployment stocks

8. During the 2024/25 period, items valued at $13.5 million (including $2.4 million from the regional deployment stocks) were deployed from the strategic deployment stocks. These deployments addressed the crises in the Middle East, South Sudan, Haiti and Ukraine, as well as the operational needs of field missions and other entities (see table 5).

Table 5
Replenishment values of strategic deployment stocks issued
(Thousands of United States dollars; budget year is from 1 July 2024 to 30 June 2025)

Receiving operations	*Amount*
Peacekeeping operations	
United Nations Interim Force in Lebanon	4 039.4
United Nations Mission in South Sudan	2 690.8
United Nations Multidimensional Integrated Stabilization Mission in the Central African Republic	2 172.6
United Nations Interim Security Force for Abyei	1 901.3

United Nations Office on Drugs and Crime	190.0
United Nations Human Settlements Programme	90.5
Office for the Coordination of Humanitarian Affairs	3.4
Economic Commission for Africa	3.0
Resident Coordinator Office	1.9
United Nations Headquarters	1.2
Subtotal	**1 771.7**
Total replenishment value of stocks issued in the period	**13 534.6**

9. Under the overall framework of strategic deployment stocks, the following were deployed from regional deployment stocks in Entebbe: prefabricated buildings, tentage, personal protective equipment, field defence stores and accoutrements worth $2.4 million to UNSOS, the United Nations Interim Security Force for Abyei (UNISFA), the United Nations Multidimensional Integrated Stabilization Mission in the Central African Republic (MINUSCA), the United Nations Organization Stabilization Mission in the Democratic Republic of the Congo (MONUSCO) and the United Nations Mission in South Sudan (UNMISS).

10. The fixed asset value of the strategic deployment stocks increased from $33.2 million as at 30 June 2024 to $38.2 million as at 30 June 2025 (see table 6). The change reflected replenishment up to the levels approved by the Strategic Deployment Stocks Board. Table 7 below provides the financial status of the stocks.

Service for Geospatial, Information and Telecommunications Technologies

11. The Service deployed 1,277 devices and 6,630 data tags across seven missions, delivered the electronic fuel management system, conducted a field remote infrastructure monitoring workshop, undertook technical missions to UNISFA and UNMISS and expanded staff capacity in 11 missions and other United Nations entities with 793 new eLearning enrolments.

12. The Service provided three Modular Technology Centre units to the United Nations Mission for the Referendum in Western Sahara (MINURSO), retrofitted three existing units with Internet of things technologies and deployed one modular command centre in the United Nations Interim Force in Lebanon (UNIFIL). Two modular command centres were also produced for the strategic deployment stocks inventory. The Service expanded the 3D printing programme by establishing a new laboratory and conducted a five-day workshop to build local capacity in the Regional Service Centre in Entebbe, Uganda (RSCE) while expanding the programme catalogue to over 100 validated models.

13. Within the context of the closure of MINUSMA, the Service managed the overhaul of integrated defence (counter-rocket, artillery and mortar) and other defence-based systems valued at $22 million. The Service coordinated the overhaul and transfer of defence-related systems through 47 stock transfer orders, facilitating the shipment of assets valued at $12.0 million to field missions and entities, including UNSOS, the Economic Commission for Africa, the United Nations Interim Administration Mission in Kosovo (UNMIK), the United Nations Truce Supervision Organization (UNTSO), the United Nations Office for West Africa and the Sahel (UNOWAS), MONUSCO, MINUSCA, the United Nations Mission to Support the Hudaydah Agreement and the United Nations Support Mission in Libya. Additional support was extended to the Office of the Special Envoy of the Secretary-General for Syria, the United Nations Military Observer Group in India and Pakistan (UNMOGIP), UNISFA, RSCE, the United Nations Disengagement Observer Force, UNMISS and the Office of the United Nations Special Coordinator for Lebanon. The Service also provided intelligence, surveillance and reconnaissance expert support to field missions, notably supporting the procurement of a counter-unmanned aerial system for MONUSCO.

14. In addition, information technology and communication equipment has been identified to support the start-up and initial operational requirements of the United Nations Support Office in Haiti (UNSOH), with transfers planned for early 2026 subject to final technical validation, logistical readiness and deployment scheduling.

15. The Service maintained its International Organization for Standardization (ISO) 20000 (service management) and ISO 27001 (information security management systems) certifications.

Central Service

16. The Conference and Learning Centre delivered 58 training activities for participants from the Secretariat and United Nations entities, covering leadership and management, Umoja analytics generative artificial intelligence, certification and

language courses, with 761 instances of participation from UNLB staff. It also supported 34 conference and training events with 805 instances of participation.

17. The Base achieved recertification of its occupational safety and health management system to the ISO 45001 standard. This included the review and analysis of 158 incident reports from 13 field missions and RSCE on the development, implementation and review of occupational safety and health programmes, remote workplace inspections, the delivery of an eight-hour training course on occupational safety and health and the provision of 1,664 occupational health and medical consultations to missions and staff worldwide.

18. Analytical reports were produced by the Property Management Unit to strengthen performance indicators and ensure the accuracy of closing balances, while data accuracy across inventories was maintained. The Property Survey Board processed 224 write-off and disposal cases, with an approved acquisition value of $10.9 million.

Office of the Director

19. The Office of the Director provided strategic support to senior leadership, coordinated cross-cutting initiatives and strengthened alignment with United Nations Headquarters. It engaged with field missions to assess support needs amid liquidity constraints and promoted efficiency efforts. The Office oversaw key strategic initiatives, including expansion of the 3R programme, a revised concept of operations for strategic deployment stocks, and sustainability efforts, while advancing partnerships and resource mobilization. It also supported audits, risk management, legal services, and communications to enhance accountability and transparency, and facilitated host country agreements and outreach activities.

20. The Regional Aviation Safety Office strengthened safety solutions for crewed and uncrewed aircraft systems by updating the safety library, the breath analyser tests for crew members and the mobile application for field data collection. The Office released two new training courses on the fundamentals of uncrewed aircraft systems and on the management of aviation-related hazards, incidents and accident reports. Eight aviation-related training courses were provided, with 913 instances of participation.

21. The Security Unit provided security and safety services to approximately 1,600 United Nations personnel, 200 dependants, 850 visitors and some 200 affiliated personnel and service providers. It conducted monthly induction briefings and delivered training sessions. Security and safety support was also provided during events and high-level visits to an estimated 2,000 visitors, as well as to about 900 trainees, trainers and facilitators.

Tenant units of the Department of Operational Support and the Department of Peace Operations

22. The budgets of tenant units and the regional aviation safety office were transferred to their respective parent offices under the support account for peacekeeping operations, effective from the 2025/26 period, as approved by the General Assembly in its resolution 79/300. However, for consistency, the 2024/25 performance information is presented in the UNLB budget, where it was originally budgeted. As from the next period, performance reporting for these entities will be in the context of the support account.

23. Key contributions of the Standing Police Capacity included: support provided to MINUSCA in developing the road plan for MINUSCA police and the comprehensive planning and performance assessment system; assistance to UNMISS

in preparing the election security plan; support for UNFICYP in enhancing the United Nations police data management system; capacity development for UNISFA in crowd management, public order, arrest and detention, and participation in the strategic assessment mission; development of a comprehensive disengagement framework for MONUSCO; and capacity-building for the association of women in the Kosovo Police under UNMIK. In addition, the Standing Police Capacity facilitated the implementation of the strategic guidance framework for international policing through the delivery of six job-specific training-of-trainers courses, as well as the United Nations police commanders' course in Kenya.

24. The Justice and Corrections Standing Capacity supported various peacekeeping missions by updating strategies and providing training and guidance tailored to evolving security conditions. For UNISFA, the rule of law support strategy was revised, and corrections and detention training were delivered. In the MONUSCO transition, a new joint rule of law programme was developed. In MINUSCA, rule of law efforts were advanced through finalized projects on community security, access to justice and pretrial detention, while the Mission also worked with national authorities to implement legal aid laws. UNMISS received support for early transition planning and for assessing the impact of its project on accountability for sexual and gender-based violence, leading to improvements in monitoring and survivor-centred practices. In Haiti, the United Nations Integrated Office in Haiti was aided in developing tools for a new high-security prison and assessing reforms under the new penal code. Connections between climate, peace and the rule of law were explored and, in Liberia, a road map was created to establish a war and economic crimes court following a request from the resident coordinator.

25. The Field Central Review Bodies Unit supported recruitment processes by endorsing cases and offering guidance, technical assistance and training to recruiters, review body members, local panels and hiring managers across the Secretariat. It also conducted reference verification for candidates selected to serve as international staff in all United Nations peace operations.

26. The Strategic Air Operations Centre centralized the management of all strategic air movements by overseeing long-term, standby and on-call (aeromedical) aircraft charter agreements. The Centre utilized widebody aircraft for troop rotations and standby and aeromedical aircraft for strategic passenger transport, and managed the coordination of landing and overflight clearances for flights operating outside of mission areas. The Centre provided medical evacuation support to missions, and the evacuation of MONUSCO international staff from Goma to Entebbe, as well as national staff and their dependants from Goma to Kinshasa. The Centre managed the emergency evacuation of non-essential Economic and Social Commission for Western Asia staff from Beirut to Istanbul, Turkey, and served as the custodian for the United Nations global satellite aircraft tracking system.

Table 8
Analysis of budget and expenditure for the 2024/25 period, by tenant unit
(Thousands of United States dollars; budget year is from 1 July 2024 to 30 June 2025)

Services provided to other entities and cost recovery

27. The Service for Geospatial, Information and Telecommunications Technologies provided a host of technology, telecommunications and consultancy services on a cost-recovery basis. The Supply Chain Service delivered technical training and operational support, including property management, logistics, engineering, environmental assistance and equipment maintenance, to peacekeeping missions and other United Nations entities, such as the Development Coordination Office, the Department of Safety and Security and Office for the Coordination of Humanitarian Affairs. The revenue generated by the Service for Geospatial, Information and Telecommunications Technologies and the Supply Chain Service amounted to $18.8 million and $0.6 million, respectively. Information on cost recoveries for the 2024/25 period is presented in table 10. The amounts do not include the amounts budgeted in individual peacekeeping missions for contracts centrally managed by UNLB.

Table 10
Analysis of cost-recovery reimbursements during the 2024/25 period
(Thousands of United States dollars)

Entity receiving support	*Services provided*	*Amount*
Peacekeeping missions	Hosting services, data storage connectivity services, event monitoring, platform services, application services and project management services	1 212.7
United Nations entities	Hosting services, data storage, connectivity services, event monitoring, platform services (professional consultancy services), campus services, geographic information system services and telecommunications	17 626.1
Subtotal, Service for Geospatial, Information and Telecommunications Technologies		**18 838.8**
Peacekeeping entities and United Nations entities	Supply chain training services	52.7
Others	Remote property management services and engineering services	570.2
Subtotal, Supply Chain Service		**622.9**
Total		**19 461.7**

28. The Base used the cost-recovery income to maintain the resources, facilities and infrastructure needed to provide services for clients under its established service-level agreements, including the funding for 21 civilian personnel positions (8 international and 13 national General Service).

Contractors and personnel occupying facilities at Brindisi and Valencia

29. During the 2026/27 period, it is estimated that 1,088 full-time personnel from other entities will occupy premises at the Base, as shown in table 11.

Table 11
Analysis of occupancy of contractors and non-Base personnel at the premises of the Base, by location

Entity	*2024/25 actual*	*2025/26 estimate (A/79/767)*	*2026/27 (estimate) Brindisi*	*2026/27 (estimate) Valencia*	*Total*	*Service-level agreement/cost reimbursement*

[a] Personnel working on projects for the Department of Operational Support and/or peace operations under contractual agreements. No costs are recovered for those personnel.
[b] Personnel servicing clients other than the Department of Operational Support or peace operations. Costs of facility occupancy are recovered through the cost-recovery mechanism.
[c] Costs funded through the proposed budgets of individual peacekeeping operations.
[d] United Nations Secretariat personnel located at the Base who are not part of the Base's staffing table.
[e] 1 post from the Security Sector Reform Section of the Office of Rule of Law and Security Institutions, 1 post from the Disarmament, Demobilization and Reintegration Section of the Office of Rule of Law and Security Institutions and 2 posts from the Mine Action Service.
[f] For 2026/27, the breakdown is as follows: 27 cost-recovery posts funded from the peacekeeping cost-recovery fund (20PCR) (24 in the Service for Geospatial, Information and Telecommunications Technologies and 3 in the Supply Chain Service), 8 3R programme posts, 1 post from the United Nations Medical Emergency Response Team, 1 extrabudgetary Geospatial Information Officer and 1 extrabudgetary Supply Chain Service Environmental Engineer.

C. Planning assumptions for 2026/27

30. The activation of contingency plans in the 2025/26 period across peacekeeping missions in response to financial constraints has resulted in greater reliance on centralized and remote digital technologies, engineering, environmental technical support and global asset and property management. This is especially the case when missions no longer retain sufficient technical capacity to assess infrastructure risks, minimum operating standards or the operational implications of camp consolidation. UNLB is currently supporting missions such as UNFICYP and MINUSCA with engineering services due to reduced in-house capacity. These operational demands are expected to remain, and even grow, in the 2026/2027 period.

31. Following a scalability review, as was done in the case of the support account, a new staffing model (by function, with reference ranges) has been applied to the budget proposal of UNLB for the 2026/27 period. The application of this staffing model would result in the abolishment of 21 posts, in addition to the 2 posts abolished due to the closure of the Kuwait Joint Support Office, and an overall reduction of $0.6 million under civilian personnel. In addition, to achieve further efficiencies and cost reductions through cost optimization, UNLB proposes additional cost reductions in discretionary non-post expenditure in the following areas: consultants, facilities and infrastructure, communications and information technology, and other supplies, services and equipment, resulting in a net decrease in operational costs of $1.8 million.

32. As a mitigation measure, the Base is adjusting its planned 2026 deliverables and realigning resources with evolving operational priorities, while minimizing any negative impact on the implementation of mandates. For example, the Base plans to streamline its administrative support across the three services and reduce training involving travel while utilizing online resources, and will continue the transition to digitization and automation. The standard life cycle for office and information technology equipment will also be extended, while replacements of global infrastructure systems will be carefully prioritized leveraging the risk-based approach of UNLB to asset replacement, which is centred around exposure of the services in terms of interruption or degradation.

Office of the Director

33. The Office of the Director will continue to lead the strategic direction of the Base, ensuring that service delivery remains aligned with organizational priorities and operational realities. Key focus areas will include integrated planning, cross-service coordination and a modular approach to mission support. The Office will invest in core support capabilities and in stakeholder engagement.

34. The Office will enhance governance and transparency through enhanced performance monitoring, budget analysis and coordination of external and internal audits. It will oversee key functions, including security, legal affairs, liaison and protocol, strategic communications and risk management. The Office will also play a pivotal role in external engagement, reinforcing host country relations and supporting the application of the host country agreement.

Supply Chain Service

35. The Service will continue to advance system-wide efficiencies, enhancing and adapting services to peacekeeping missions and other entities in the core business areas of end-to-end supply chain, engineering and infrastructure support, and environmental technical support. It will also continue to provide remote property management support for the resident coordinator system (136 offices) and the

Department of Safety and Security (124 offices) on a cost-recovery basis. In addition, the Service will advance its efforts to digitally transform supply chain processes.

36. The Base will continue to strengthen acquisition planning for aligning mission demand with internal supply sources. Each quarter, the process aligns entity demand from the supply chain planning tool with existing inventory in the United Nations reserve, strategic deployment stocks, mission surplus and items restored through the 3R programme, resulting in a supply plan with opportunities to optimize resources. The Base also supports liquidating entities by facilitating the implementation of jointly developed and approved asset disposal plans.

37. The Base will manage an average volume of 1,000 containers and several thousand stock-keeping units. It will also provide critical trans-shipment services for missions facing delivery restrictions or global supply chain disruptions.

38. The Base will continue to provide environmental technical support through the planning and implementation of mission-specific infrastructure management plans, supported by training, field remote infrastructure monitoring, and remote and on-the-ground support.

39. Building on support provided in the current period through facilitating the transfer of several armoured vehicles and other equipment from the United Nations Transitional Assistance Mission in Somalia (UNTMIS) and UNAMI to other missions and entities, including UNSOH, the Base will continue to support missions as demand increases under contingency planning.

40. For the newly established UNSOH, UNLB is providing required start-up support in relevant areas of supply chains and information and communications technology (ICT) functions through the deployment of assets from strategic deployment stocks, the United Nations reserve and the 3R programme. In parallel, UNLB is expanding the 3R programme through a pilot refurbishment initiative at UNMISS involving two Caterpillar road graders to be refurbished in Kenya by a certified regional partner that manufactured the original equipment, with completion expected in 2025/26. Other support includes on-site mission support teams with remote backstopping, as well as planning and design for utilities and camp infrastructure to meet performance, compliance and environmental standards. UNLB will continue to provide on-the-ground start-up assistance and implement a phased handover as the Mission's internal capacity expands.

Planning and Sourcing Support Section

41. The Planning and Sourcing Support Section will continue to oversee upstream supply chain source planning, global asset management, management of strategic deployment stocks, field contract performance monitoring, environmental technical support and customer service.

42. Through the integrated business planning process, the Base provides a structured quarterly mechanism to capture the demand of all field entities and proactively propose sourcing solutions from existing inventories, in line with the recommendation of the Advisory Committee (A/79/724/Add.6, para. 31) endorsed by the General Assembly in its resolution 79/300. This process is formalized through supply plans signed with missions. This methodology is proactive and standardized, ensuring that mission requirements are primarily met through internal sources.

43. Starting from the 2025/26 period, the Section will also coordinate the development and implementation of missions' multi-year asset replacement plans. Now a mandatory requirement in each entity's budget report, these plans address opportunities for enhancing forecasting, optimizing inventory management and

minimizing the risk of overprocurement, in alignment with the report of the Board of Auditors for 2022/23 (A/78/5 (Vol. II), paras. 44–45), to ensure a more structured, forward-looking approach to asset life cycle planning. The aim is to proactively plan asset replacement over a five-year period, reducing reliance on new procurement and extending the life cycle of existing equipment.

44. The Base will prepare 44 quarterly supply plans for peacekeeping missions and 52 for special political missions, in addition to developing 13 asset replacement plans for peacekeeping missions and 11 for special political missions, covering approximately 23,000 assets globally. These plans will be executed through inter-mission transfers, the replenishment of strategic deployment stocks and coordination of the redistribution of mission surplus. This work will extend to supporting mission liquidations (UNTMIS, UNAMI and UNIFIL), including the review of preliminary asset disposal plans and the transfer of recoverable materials and equipment to the United Nations reserve.

45. As part of the warehouse optimization project, the Section developed guidelines on organization-wide packaging and labelling standards in 2025/26. During 2026/27, it will begin implementing these standards at the Base, with a phased expansion to field missions. The initiative is aimed at streamlining the storage and movement of goods by reducing errors, damage and preparation time through standardized packing.

46. The environmental technical support capacity will continue to provide remote and on-site support while leading three thematic working groups that promote engaging in strategic dialogue, sharing best practices and identifying recurring technical challenges and training needs.

47. Since its establishment, the capacity has contributed to the development of 25 environment-related global system contracts worth over $690 million and serves as the sole environmental expert across the remaining 10 categories, maintaining its ISO 14001 environmental management systems certification.

Strategic deployment stocks

48. The strategic deployment stocks will continue to be a key enabler of field operations in 2026/27, in particular in support of the establishment of UNSOH. In addition to the provision of strategic goods, associated enabling capacity will be provided through service contracts, currently under development, throughout the start-up phase.

49. Information on the revised concept of operations for strategic deployment stocks was presented in paragraphs 24–27 of the proposed budget for 2025/26. Therein, it was noted that, in response to paragraph 56 of the report of the Advisory Committee (A/78/744/Add.5), endorsed by the General Assembly in its resolution 78/295, planning assumptions for strategic deployment stocks had been revised. The strategic deployment stocks transitioned from a purely material-holding model to a more integrated, demand-driven "stocks and solutions" approach. This expanded model now supports a broader range of scenarios, including mission start-ups, mandate surges, health emergencies, natural or human-made disasters, and operational continuity requirements, while extending the client base to include special political missions; other Secretariat entities; United Nations agencies, funds and programmes; and regional organizations.

50. Key data illustrating the overall efficiency and impact of the strategic deployment stocks show substantial improvement, with fulfilment lead times reduced by 54 per cent, from 241 days in 2021/22 to an average of 111 days in 2024/25. The operationalization of the online platform in 2024 further enhanced accountability,

transparency and decision-making by consolidating data on requests, holdings, rotation and financial performance.

51. In 2026/27, the Base will further advance implementation of the revised concept of operations through reviews of stock composition, category management approaches, mission support requirements, environmental considerations and operational efficiency, as well as decisions on central storage compared with regional storage.

52. The approach to deployment solutions will increasingly focus on delivering ready-to-use capabilities, with integrated enabling services such as installation, assembly, testing, commissioning and logistics support (such as transportation, material handling and initial operations). This is aimed at ensuring that the full-service potential of strategic stocks is realized by maximizing the effectiveness and impact of each deployment.

53. Implementation of the revised concept will allow for accelerated stock rotation, reduced depreciation and improved resource utilization.

Regional deployment stocks

54. The Base will continue to collaborate with RSCE to maximize the benefits of regional deployment stocks, ensuring that they continue to provide timely and effective support for the operational needs of all clients. Following the first consignment of 24 ablution units in 2022, the range of materials now includes prefabricated buildings, field defence stores, accoutrements and personal protective equipment.

Delivery and Return Section

55. The Delivery and Return Section will continue to oversee downstream logistics activities, as well as the areas of engineering, infrastructure management, and maintenance and repair. The Section is responsible for managing strategic deployment stocks, United Nations reserves, 3R programme assets and the Base's operational stocks, with a combined value of approximately $110 million stored across 13 warehouses and 8,000 m^2.

Warehouse and distribution

56. The services include warehouse operations, receiving and inspection, movement control operations, property disposal, central maintenance and repair of equipment, both in stock and in use for internal Base operations, as well as the provision of technical support and advice in warehouse operations to the field. The Base processes between 800 and 1,000 inbound and outbound shipments annually, operating in full compliance with ISO 9001:2015 quality management standards and the International Public Sector Accounting Standards (IPSAS). The Base will enhance its operations by implementing standardized packaging and labelling guidelines, optimizing warehouse space through consolidation and introducing digitally readable labels for items and bin locations. Estimated warehouse resource efficiencies in the range of a 20 to 35 per cent reduction in processing time are expected.

Central maintenance and repair

57. The central maintenance and repair function will deliver comprehensive fleet management, covering approximately 600 vehicles and 90 generators, through maintenance, spare parts oversight and standardized processes. This will include approximately 90 vehicles serviced under cost recovery arrangements for entities

such as UNICEF, the Department of Safety and Security and the Office for the Coordination of Humanitarian Affairs.

Innovation and infrastructure support

58. Through the innovation and infrastructure support capacity, the Base serves as the United Nations central hub for engineering and infrastructure expertise, delivering scalable, field-ready solutions. Through the three service streams of (a) technical advisory and compliance, (b) project design and delivery and (c) category management and coordination, the Base provides support in effective procurement processes while ensuring that the engineering outputs are tailored to mission needs. This support spans a wide range of United Nations entities. In 2026/27, the Base will assist with the liquidation of UNAMI, the resizing of UNMISS, the liquidation of UNIFIL and the start-up of UNSOH while continuing support for missions such as MINUSCA, MINURSO and UNFICYP. These services will ensure continuity in critical operations, including Umoja transactional support for asset disposal, inventory adjustments and financial reporting. The Base prepares final disposition of assets reports for submission to the General Assembly and contributes IPSAS-compliant inputs to the Secretariat's consolidated financial statements.

Mission support

59. Mission support teams, coordinated by the Supply Chain Service and drawn from across the Base's expertise, provide rapid surge capacity. Remote asset management combines Umoja execution with real-time quality assurance, easing the burden on field missions and improving accuracy. A centralized data quality control function strengthens oversight and audit readiness. Experience from recent liquidations, including of MINUSMA and the African Union-United Nations Hybrid Operation in Darfur (UNAMID), shows that support teams reduced processing time by over 40 per cent while ensuring data consistency. In the year ahead, the Base will continue to institutionalize lessons learned and reinforce its role as the United Nations system's provider of transition support in property and asset management.

3R programme

60. The expansion of the 3R programme will continue to be a priority. To optimize efficiency and generate cost savings, the Base is integrating the 3R approach into its strategic asset management framework through full alignment with the integrated business planning mechanism, ensuring that the approach is considered as an equal and alternative sourcing option alongside the strategic deployment stocks and United Nations reserve. This strategy aligns with the five-year asset replacement plans and focuses on high-value assets (acquisition value of $150,000 or more), for which refurbishment has consistently delivered significant cost avoidance and operational benefits.

61. The Base is spearheading efforts to classify assets at the global level and further expand its refurbishment capacity. To this end, the 3R programme is actively seeking to establish partnerships with certified vendors of original equipment at refurbishment centres located closer to mission areas, which has the potential to reduce total logistical and refurbishment costs as well as overall turnaround times.

Service for Geospatial, Information and Telecommunications Technologies

62. Operating under the governance, policies and standards established by the Office of Information and Communications Technology, the Base will continue to provide core ICT services to peacekeeping operations, special political missions, the Secretariat and other supported entities. The Service manages over 100 service-level

agreements, covering 64,000 clients within and beyond the Secretariat, and ensures 24/7 service continuity and 100 per cent availability from its twin technology centres in Brindisi and Valencia.

63. Guided by the ICT strategy, the Service will continue consolidating secure hybrid cloud hosting, strengthening business continuity, standardizing enterprise platforms and enhancing cyberresilience. The Service will also promote the implementation of the Data Strategy of the Secretary-General for Action by Everyone, Everywhere, providing field missions with improved data governance, interoperability and analytics services.

Core digital technology services

64. Operating from its high-availability data centres in Brindisi and Valencia, the Service will maintain its core digital service offerings, including infrastructure hosting, enterprise platforms, secure connectivity and remote support services provided to 27 field missions across 202 geographic locations.

Digital transformation and innovation

65. The Service will continue to advance the digital transformation by integrating emerging technologies into its service portfolio. The Unite field remote infrastructure monitoring system, an Internet of things solution, currently consists of 9,105 sensors generating 43,137 data points across four domains: (a) energy, (b) water, (c) wastewater and (d) fuel. These data points are collected from systems such as generators; heating, ventilation and air conditioning systems; remote asset monitoring systems; fuel tanks; and weather stations. Deployed in 22 missions across 120 locations, the coverage of field remote infrastructure monitoring will continue to be expanded to improve infrastructure oversight, optimize energy and water consumption, and enhance operational safety. Additive printing will be scaled up to reduce downtime for non-critical spare parts and lower acquisition costs. Geospatial information systems and Internet of things data lakes (central repositories that store large volumes of raw data) will support evidence-based planning, and artificial intelligence-powered analytics will drive predictive maintenance and risk assessments. United Nations Maps will continue to underpin location-based applications such as Unite Aware and the Unite field remote infrastructure monitoring system, and also geoenable more than 20 field applications, enabling missions to identify geospatial patterns and insights critical to planning and operations.

Operational innovation

66. The Service will support operational effectiveness and efficiency through new technology deployments. Extended reality platforms will enable immersive training environments at a lower cost. Synergies with supply chain operations are being explored, such as facilitating the virtual inspection of assets for the 3R programme. Digital twins will continue to provide detailed 3D models of United Nations camps to support planning and camp management in field missions. Real-time tracking systems using satellite and geolocation technologies will strengthen the monitoring of staff, vehicles and assets, including within supply chain operations. The Service currently supports seven missions, now including UNSOH, with about 49 devices dedicated to monitoring over 10 convoys or consignments.

Operational resilience

67. To ensure uninterrupted operations, as was necessary in October 2024 due to the DANA (high-altitude isolated depression) flooding event and soon thereafter in April 2025 during the 14-hour Iberian Peninsula power outage, the Service plans to conduct

around 15 disaster recovery exercises. This same capability is provided to other entities, such as UNICEF, to boost United Nations-wide operational resilience.

Standards, governance and engagement

68. These services will remain aligned with international best practices and recognized standards, including the ISO 20000 certification in service management and the ISO 27001 certification in information security management. With over 170 engagements across entities annually, the Service will remain responsive to evolving client needs. Service-level agreement compliance, currently at 98.0 per cent and consistently high since 2014, reflects strong performance in service delivery and accountability.

Efficiency and centralization

69. The Service plans to expand centralized ICT to maximize efficiency and reduce duplication. A pilot in MONUSCO during 2026/27 will enhance remote geospatial services such as data management, geoanalytics, satellite imagery mapping and geospatial applications. The results of this pilot will inform the potential roll-out of the model to other missions.

70. Services like digital Terrestrial Trunked Radio (TETRA) communications, Modular Products (M-Products) and United Nations Maps offer cost-effective, interoperable alternatives to commercial platforms, reducing the need for missions to procure or manage their own systems and resulting in estimated cost avoidance of $2.4 million for 2026/27 when compared with commercial procurement for the three services. Having successfully refurbished and redeployed high-value integrated defence systems to UNSOS, MONUSCO and MINUSCA following the closure of MINUSMA, additional systems from the liquidation of UNAMI will be similarly optimized.

71. While these represent some of the most significant efficiency drivers for the 2026/27 period, the broader portfolio also contributes to enhancing coordination across the United Nations system. The uncrewed systems training service reduces training costs by centralizing capacity-building, producing savings of around $35,000 per course. Cloud management services provide scalable infrastructure without major capital investment. The geospatial information system workspace enables secure, cross-mission collaboration through cloud-based geospatial tools.

72. The Base will continue embedding environmental responsibility in its digital services. In 2026/27, the United Nations smart camp initiative will remain a key pillar enabling missions to operate more responsibly through the ongoing development of the Unite field remote infrastructure monitoring system, its integration with contingent-owned equipment, and the effective use of infrastructure and environmental data. The recent rollout of the action planning module within the Environment Action Planning and Performance (eAPP) application, supported by the Base's digital technology and environmental expertise, in collaboration with the Environment Section in the Office of the Under-Secretary-General for Operational Support, demonstrates the value of an integrated service model that enables improved operational planning and environmental performance. The Base will also advance the integration of the electronic fuel management system with field remote infrastructure monitoring, supporting real-time monitoring and data automation for over 8,600 generators in remote locations, to improve fuel efficiency, reduce manual reconciliation and strengthen resource management and operational accountability. These efforts will support informed decision-making, lower the environmental footprint and align with the five pillars of the environment strategy for peace operations (2023–2030), and have wider environmental impacts. Building on insights

from the November 2024 workshop held in Valencia, the initiative will also explore extending these technologies to contingent-owned equipment, which comprises 51 per cent of United Nations camps. Participants identified opportunities to automate data collection, enhance decision-making and strengthen cybersecurity, laying the groundwork for future partnerships, pilot projects and a community of practice.

73. The Base will continue providing geoanalytic and groundwater services in responsibly managing natural resources. Since 2010/11, these services have enabled the drilling of 41 boreholes in several missions, with a 97 per cent success rate and an average yield of 68,000 litres per day. In 2026/27, support is planned for 28 sites, as well as groundwater exploration, the identification of drilling targets, drilling supervision, well design and the rehabilitation of existing wells. Groundwater monitoring will also be implemented using sensors to ensure sustainable groundwater management and a positive legacy.

74. Through centralized and energy-efficient digital platforms, such as Internet of things monitoring, the Base will help reduce emissions, cut on-site requirements and enable remote environmental management. These tools are expected to reduce mission energy consumption by approximately 15 per cent.

75. The Base will continue to play a vital role in enhancing the safety and security of United Nations personnel through integrated digital solutions. The Service will continue to support risk mitigation, situational awareness and operational readiness by leveraging advanced tools such as geo-intelligence analysis, real-time asset tracking and digital twin technologies. Solutions, including the United Nations Maps Mobile, tracking as a Service, 3D Camp Manager and extended reality applications, will continue to enable missions to navigate remote areas, simulate emergencies and train personnel safely and cost-effectively. These services are available to support approximately 27 field missions and around 24,000 personnel, reducing risks while minimizing the need for on-site deployments. The Base will also continue to support implementation of the Department of Peace Operations integrated base defence policy (2023) by managing sensitive technologies that improve surveillance, patrol efficiency and the overall security posture of field operations.

Central Service

76. The Central Service will continue to provide management and administrative support to the Base in the areas of human resources, finance and budget, procurement and facilities management, enabling the effective delivery of supply chain and digital technology services. It will also continue to provide administrative support, following the transfer of tenant units from the budget for the Base in 2025/26 to the budgets of the Department of Peace Operations and the Department of Operational Support.

77. The occupational safety and health support programme will focus on strengthening advisory and evaluation services to support clients in establishing and implementing effective occupational safety and health programmes, in line with the field occupational safety risk management policy. This includes the adoption and implementation of enhanced digital platforms to improve compliance monitoring, accelerate the implementation of control measures and enable faster incident response.

78. The Service will also scale up its remote support services, including remote inspections and risk assessments, new subscription-based occupational safety and health software, and online training courses. These tools will increase accessibility to safety and best health practices and enhance responsiveness to risks and incidents, building on test exercises conducted during the 2024/25 period. For example, the remote inspection for the UNMOGIP field offices conducted in March 2025

demonstrated measurable improvements in compliance with the field occupational safety risk management policy while reducing field support costs.

79. Facility management will leverage field remote infrastructure monitoring and renewable energy solutions to reduce environmental impact and operational costs. The Finance and Budget Unit will strengthen data quality and financial monitoring to support results-based management, improve accountability and ensure transparency, especially in the context of expanded service delivery to a growing number of clients. Human resources support will be central to implementing the new staffing model by identifying and applying staffing efficiencies through centralized and consolidated support functions. At the same time, the Base will invest in training, rejuvenation and retention to maintain operational excellence, preserve institutional knowledge and strengthen workforce adaptability. Procurement support will focus on optimizing acquisition processes, strengthening compliance and improving timelines.

Mission support initiatives

80. The Base will maintain its commitment to reducing environmental impact in line with the energy infrastructure management plan. The strategic master plan will encompass infrastructure assessments, energy efficiency improvements, process optimization and digital transformation projects, for sustainable investments and long-term resilience. These initiatives, alongside ongoing energy efficiency measures and smart building technologies at both Brindisi and Valencia, will enhance operational resilience, increase independent energy production and advance broader sustainability objectives.

Staffing model (by function with reference ranges)

81. As an extension of the scalability review of the support account, and in response to the legislative requests for UNLB and RSCE, a staffing model (by function with reference ranges) has also been applied to the proposed budget of UNLB and RSCE for the 2026/27 period. The model categorizes UNLB operations into three functions: (a) Supply Chain Service; (b) digital technology service delivery, covering the Service for Geospatial, Information and Telecommunications Technologies; and (c) management – UNLB, comprising the Central Service and the Office of the Director.

82. The budget proposal of UNLB includes changes in posts and positions driven by the staffing model, with the 2020/21 period as the baseline, as applied in the support account revised estimates for the 2025/26 period. The review also considered changes in the scale of operations that may have occurred since the baseline year. In this context, the review highlights that UNLB has evolved over time to serve a broader range of clients beyond peacekeeping – to include both Secretariat and United Nations system entities – in line with the principles of the management reform adopted by the General Assembly in 2019 to organize work according to the services provided rather than the client served.

83. The model takes into consideration a wide range of possible workload drivers, including different drivers related directly or indirectly to the scale of operations, as well as other possible drivers of the support required. The model identifies which workload drivers are relevant for each function and assigns them a relative importance in determining support needs. It then generates a reference range formula that indicates how staffing levels for peacekeeping and special political missions should adjust in response to changes in operational requirements. Support staffing requirements are expressed in terms of full-time equivalents, which represent the work of a single person, on average, in a given function. The model and reference ranges apply to all UNLB-funded posts and positions, including contractors.

D. Regional mission cooperation

84. During the 2024/25 period, UNLB collaborated with the African Union on potential support for a continental base in Douala, Cameroon, including in the area of strategic stocks. The Base continued its engagement with the Organization for Security and Cooperation in Europe to explore opportunities for cooperation on geospatial information systems and strategic reserves.

85. The Base supported the United Nations Office at Nairobi and the World Food Programme in the implementation of the field remote infrastructure monitoring system and strengthened partnership with the United Nations Environment Programme under the Greening the Blue initiative. Cooperation and synergies with RSCE were advanced with regard to regional deployment stocks and joint capacity-building for troop- and police-contributing countries in additive printing, digital twin technology and field remote infrastructure monitoring.

86. In 2026/27, the Base will enhance collaboration with regional organizations, in particular the African Union, to improve operational synergies, innovation and joint capabilities in line with General Assembly resolution 79/329. This includes potential technical assistance in supply chains, digital technologies and environmental management through shared knowledge initiatives.

87. The Base will strengthen its partnership with RSCE, focusing on joint efforts such as managing regional deployment stocks, expanding the field remote infrastructure monitoring system, advancing digital twin technologies for smart camps and operating the regional 3D printing hub for non-critical components. Capacity-building will focus on field-based training for troop- and police-contributing countries in digital technologies. This will include sessions hosted through the United Nations C4ISR Academy for Peace Operations, co-led by UNLB and RSCE technical experts.

F. Proposed staffing changes

Staffing justifications

Staffing model (by function with reference ranges)

Abolishment

88. Based on the application of the model as described in paragraphs 81 to 83 of the present report, it is proposed that a net total of 21 posts be abolished as follows: 2 posts (1 G-4 Team Assistant and 1 FS-6 Finance and Budget Officer in Brindisi) under management – UNLB function; 16 posts (2 P-3 Engineers, 2 G-7 Senior Logistics and Senior Contracts Management Assistants, 4 G-5 Logistics Assistants, 7 G-4 Assistants and 1 G-3 Maintenance Worker) under the Field Supply Chain function; and 3 posts (1 Telecommunications Technical Assistant (G-6) in Valencia and 2 G-5 Information Systems Assistants (G-5) in Brindisi) under the digital technology service delivery function. The summary of the review and implementation of the model is presented in annex II to the present report.

89. Support services for the processing of payroll for UNLB national staff were provided by the Kuwait Joint Support Office, where two posts of Finance and Budget Assistant (G-4) from the approved staffing of UNLB were embedded. In the context of the closure of the Office as at 1 July 2026, it is proposed that the two posts be abolished.

Conversion

90. One international United Nations Volunteer position is proposed for conversion to national United Nations Volunteer, to achieve sustainable capacity while remaining aligned with nationalization and capacity-building objectives. The proposed change would ensure continuity of essential communications functions to support mission-critical outreach. Strategic communication across all levels is critical for demonstrating mandate delivery, resource utilization and the strengthening of transparency and stakeholder engagement. Maintaining a dedicated specialist capacity at the national level will provide consistent, contextually informed messaging, strengthen local engagement and ensure rapid dissemination of accurate information.

Reclassifications

91. Two reclassifications of Field Service posts (FS-6) to P-2 posts are proposed, seeking to balance cost efficiency with the preservation of essential technical functions. Transitioning the posts to entry-level P-2 posts would support workforce rejuvenation, ensure alignment with evolving industry practices and create opportunities to attract early-career professionals equipped with modern skills and innovative approaches. This adjustment would also broaden the candidate pool, thereby promoting gender parity and enhancing diversity in technical roles.

92. One Geospatial Information Officer (FS-6) in the Infrastructure Operations Section in Brindisi is proposed for reclassification to Associate Geospatial Information Officer (P-2). By establishing the post at the P-2 level, the Organization would strengthen its ability to attract and retain emerging talent, while supporting long-term capability development and succession planning. This adjustment is also required for the Section to effectively enable the Organization’s digital transformation. Maintaining the post at its current level might limit the Organization’s ability to attract candidates with the required academic background and digital skill set.

93. One post of Information Systems Officer (FS-6) in the Client Solutions Delivery Section in Brindisi is proposed for reclassification to Associate Information Systems Officer (P-2). Embedding new talent ensures continuity of expertise, strengthens succession planning and builds long-term capacity to manage evolving digital infrastructure.

Redeployment

94. One post of Senior Field Security Assistant (G-7) is proposed for redeployment from the Office of the Director in Brindisi to the Base in Valencia to strengthen the Office of the Chief of the Service for Geospatial, Information and Telecommunications Technologies in fulfilling its responsibilities as head of premises and area security coordinator. The role holds overarching responsibility for the safety and security of core personnel and tenant United Nations agencies, safeguarding mission-critical assets, as well as for coordination with local authorities.

95. Given the strategic importance of Valencia as a critical digital technology hub within the United Nations system, reliance on one staff member who is currently performing functions presents unacceptable operational risks. Without this additional capacity, the Organization remains vulnerable in the event of staff absence, redeployment or major incidents. The reliance on only one core security staff member has demonstrated significant risks, as evidenced during the DANA flooding event in Valencia in 2024 and the nationwide blackout in Spain in 2025. These events highlighted the urgent need for at least two core security staff to ensure continuity, coordinate with emergency operators, provide surge capacity and safeguard operations during emergencies.

96. At the senior General Service level, the post provides the necessary technical expertise to support the head of premises and area security coordinator in exercising decision-making authority to ensure the consistent application of security policies across the Base, enhance operational efficiency through coordination with local authorities and tenant agencies, guarantee timely incident response and emergency preparedness, and provide uninterrupted support to critical activities.

Continuation of general temporary assistance positions

Central Service Occupational Safety and Health Unit

Occupational Health and Safety Officer

97. The position of Occupational Health and Safety Officer (P-3), funded under general temporary assistance, was established on 1 July 2021 to strengthen the occupational safety and health capacity of United Nations entities. The continuation of this position is necessary to address work-related safety and health incidents, which ranged in number from 117 in 2020 to a peak of 202 in 2023 but has since decreased to a projected 134 at the end of 2025. The decrease in cases corresponds to the period in which the position was filled. The position will also ensure that United Nations entities are effectively equipped and supported to develop, implement and maintain an occupational safety and health management system. The incumbent will support the significantly increased scope of services provided to approximately 50 locations.

Supply Chain Service, Environmental Technical Support Unit

Environmental Engineer

98. A position of Environmental Engineer (P-3), funded under general temporary assistance, was established on 1 July 2019 within the Environmental Technical Support Unit. The incumbent will continue to lead the water and wastewater pillar,

under the overall direction of the Environment Section in the Office of the Under-Secretary-General for Operational Support. The Environmental Technical Support Unit, augmented through the Rapid Expert Assistance and Cooperation Teams assistance facility, is leading the development of operational guidance to support sustained wastewater risk management, without which missions may expose the Organization to unacceptable risk. The incumbent will also play a central technical assistance role as missions make improvements in wastewater management, a strategic priority for the Department of Operational Support, and will assist in the development and implementation of guidelines on water and wastewater and standard operational procedures that provide consistent definitions of acceptable treatment levels and solutions, as well as risk assessment and reporting. The incumbent will also guide missions to plan for multi-year investments and their projected results, to upgrade critical infrastructure.

Table 17
Application of the scalability staffing model, by function
(Number of posts and positions)

Function	*Gross reduction required between 2020/21 and 2025/27*	*Reduction made since 2020/21*	*Net reduction required in 2026/27*	*Total proposed abolishments in 2026/27*	*Abolishments by grade*
Management – UNLB	(2)	–	(2)	(2)	1 G-4 and 1 FS-6
Field supply chain	(18)	2	(16)	(16)	2 P-3, 2 G-7, 5 G-5, 6 G-4 and 1 G-3
Digital technology service delivery	(24)	21	(3)	(3)	1 G-6 and 2 G-5
Total change	**(44)**	**23**	**21**	**(21)**	

Note: Two additional General Service posts are also proposed for abolishment due to the closure of the Kuwait Joint Support Office.

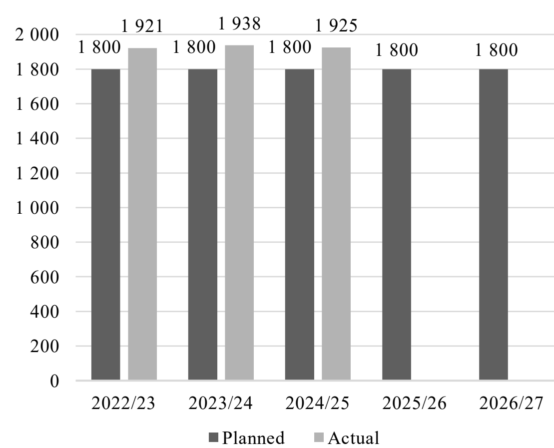
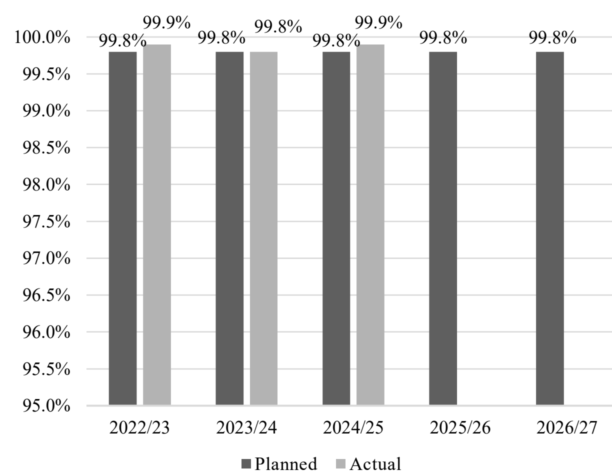
G. Results-based budgeting frameworks[1]

Expected accomplishments	*Indicators of achievement*
1.1 Rapid, effective, efficient and responsible operational and technical support services for client missions	1.1.1 Overall score on strategic deployment stocks operations index based on four performance indicators out of 200 maximum (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 175)
	1.1.2 Percentage of technical advice requests for local procurement for goods and services in field missions issued within 5 working days of receipt (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 90 per cent)
	1.1.3 Percentage of planned blood deliveries to missions completed as per contract terms and conditions (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 95 per cent)
	1.1.4 Percentage of high-value, low-utilization assets participating in the circular programme (return-refurbish-reuse) refurbished within 180 days to enable deployment to requesting entities within the United Nations system

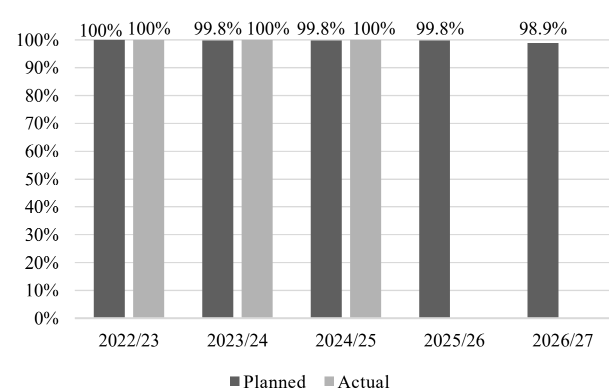
[1] The results-based budgeting outputs are available for consultation on the Umoja Analytics platform as part of efforts to streamline the volume of information presented in the new combined budget and performance report.

Expected accomplishments	*Indicators of achievement*
		1.1.5 Percentage of remote mission support in property and assets management completed within agreed time frames (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 90 per cent)
	1.1.6 Percentage of Supply Chain Service client satisfaction monitored through biannual customer-focused surveys (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 90 per cent)
	1.1.7 Percentage of on-the-ground and remote environmental technical assistance requests attended within 15 days (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 95 per cent)
	1.1.8 Overall score on property management index, based on 20 underlying key performance indicators out of 2,000 maximum
	


Expected accomplishments	*Indicators of achievement*
	1.1.9 Percentage of goods agreed by missions to be supplied from existing inventory (strategic deployment stocks, surplus, 3R, United Nations reserve) based on quarterly supply plans from peacekeeping and special political missions (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 75 per cent)
	1.1.10 Percentage of service orders initiated within 48 hours of receipt and completed within 96 hours, utilizing the Umoja preventive maintenance module, for equipment to be deployed to missions (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 95 per cent)
	1.1.11 Availability of centrally hosted United Nations field applications

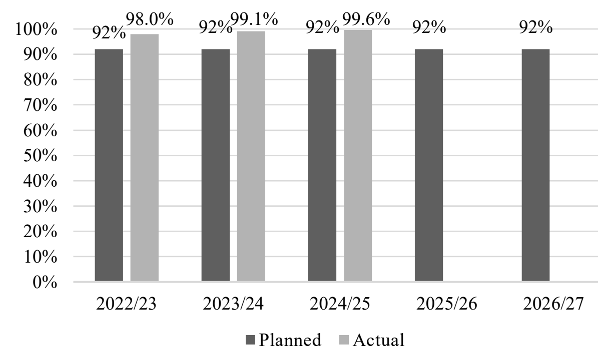


1.1.12 Availability of the wide area network and underpinning enterprise data centre infrastructure

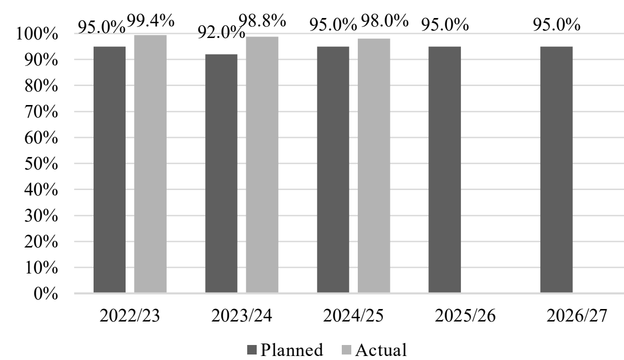


1.1.13 Availability of United Nations hybrid cloud, inclusive of enterprise scale platforms (Umoja, United Nations online examinations and tests system, General Assembly debate web page, artificial intelligence,

Expected accomplishments	*Indicators of achievement*
	email/messaging etc.) and underpinning infrastructure (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 95 per cent)
	1.1.14 Percentage of mission clients expressing satisfaction with geospatial, information and telecommunications technologies services



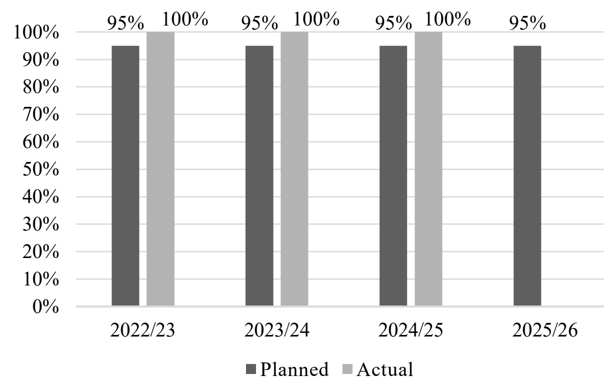
1.1.15 Percentage of mission ICT incidents addressed in line with service-level agreement standards



1.1.16 Average performance score of occupational safety and health support services provided to clients based on timeliness and attainment of agreed performance standards (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/2027: ≥ 90 per cent)

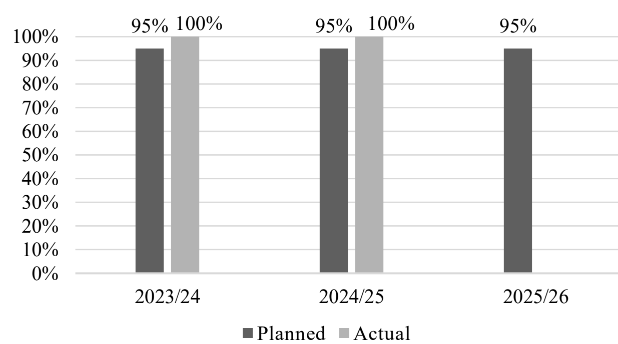
1.1.17 Percentage of strategic deployment stocks and United Nations reserve items ready for issuance from the Base within 45 days from the approved stock transfer request (2022/23: not applicable; 2023/24: not applicable; 2024/25: 100 per cent; 2025/26: 95 per cent; 2026/27: not applicable)

Expected accomplishments	*Indicators of achievement*
	1.1.18 Process cycle time for strategic deployment stocks and United Nations reserve orders for single and multiple items from receipt of stock transfer request to release of stock transfer order within 2 and 5 working days, respectively



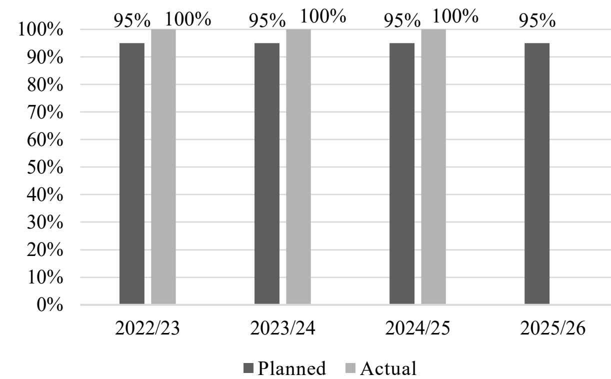
1.1.19 Percentage of strategic deployment stocks and United Nations reserve items ready for issuance from regional deployment stocks within 15 days of the approved stock transfer request (2022/23: not applicable; 2023/24: not applicable; 2024/25: 100 per cent; 2025/26: 95 per cent; 2026/27: not applicable)

1.1.20 Percentage of mission requests for which mission support teams are deployed within 15 working days of the approved request

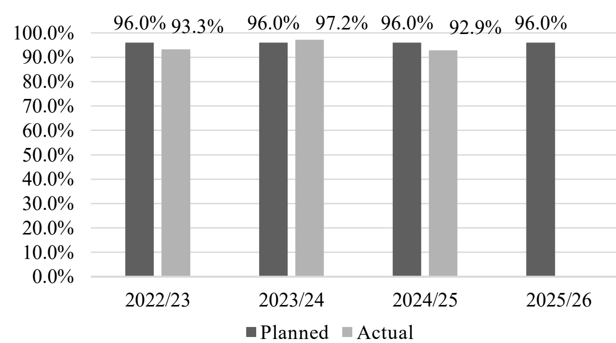


1.1.21 Percentage of non-serialized inventories (strategic deployment stocks, United Nations reserve items, Base) held at the Base checked by cycle counting during the financial year

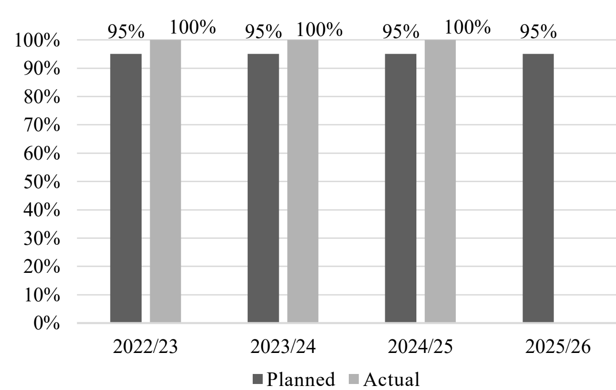
Expected accomplishments	*Indicators of achievement*



1.1.22 Supply Chain Service clients' satisfaction rate, captured through customer-focused surveys on services (included in the services catalogue) rendered during the period

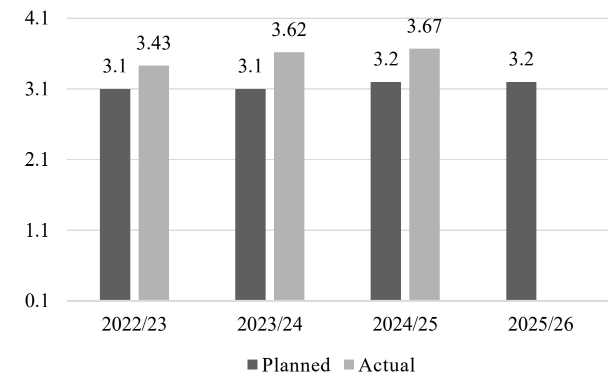


1.1.23 Percentage of on-the-ground and remote environmental technical assistance requests provided and fulfilled in support of 10 field missions and client entities in the areas of energy, water and wastewater and solid waste management within 90 days

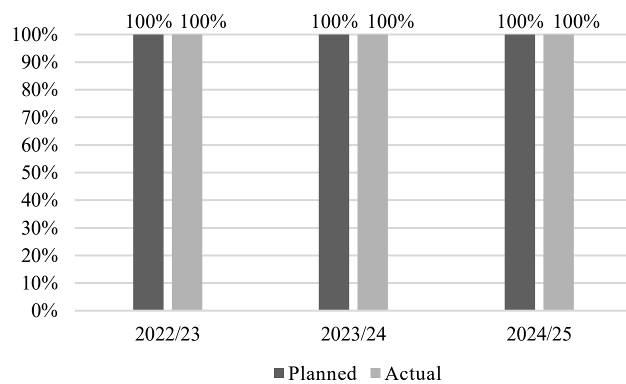


1.1.24 Efficiency of use of satellite capacity measured in bits per Hz

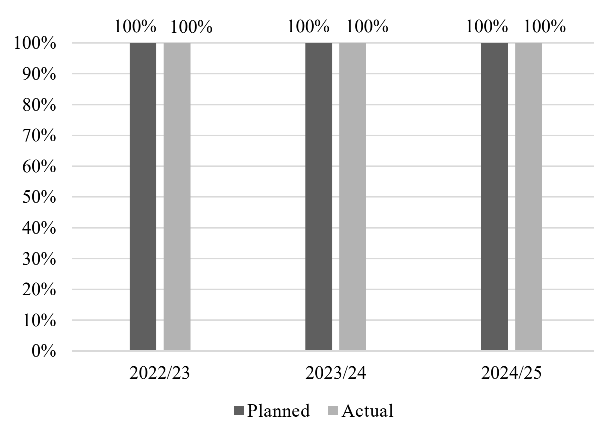
Expected accomplishments	*Indicators of achievement*



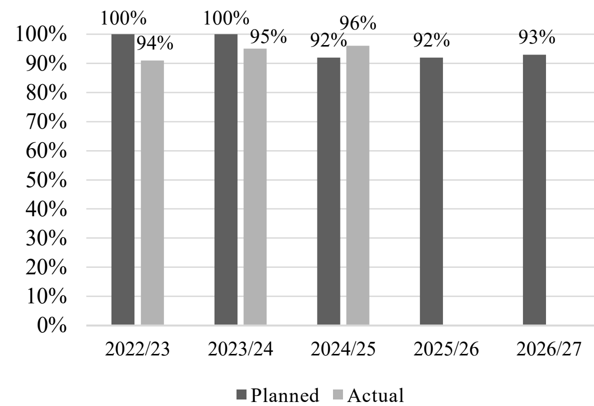
1.1.25 Percentage of strategic air movements centrally controlled and monitored



1.1.26 Percentage of strategic flights and troop rotations under long-term charter agreements managed, tasked, controlled and monitored

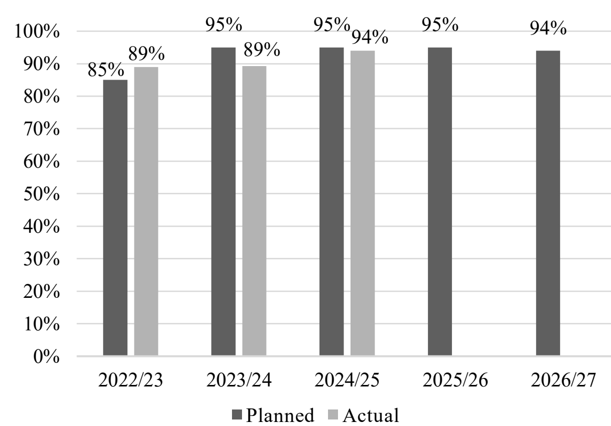


Expected accomplishments	*Indicators of achievement*
	1.1.27 Timely response to requests by field missions for special or strategic flights outside the mission area (number of hours) (2022/23: 48 hours; 2023/24: 48 hours; 2024/25:48 hours; 2025/26: not applicable; 2026/27: not applicable)
1.2 Rapid, effective, efficient, and responsible campus services	1.2.1 Overall score on the Department of Operational Support environment management scorecard



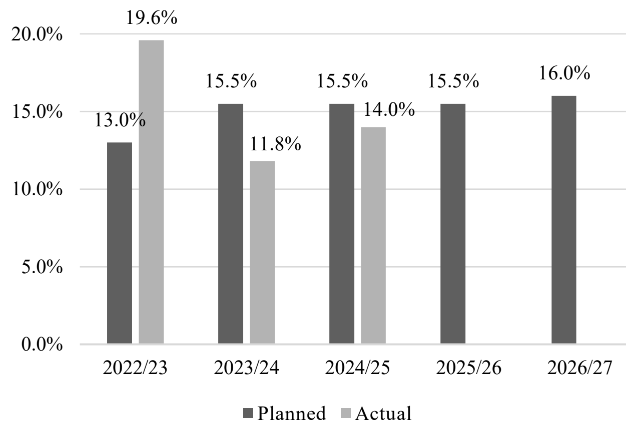
1.2.2 Percentage of equipment and asset records master data for all UNLB-managed materials that are fully enriched and compliant with IPSAS standards and United Nations asset and property management policies, demonstrating accurate classification, valuation and traceability across the inventory system (2022/23: not applicable; 2023/24: not applicable; 2024/25: not applicable; 2025/26: not applicable; 2026/27: 95 per cent)

1.2.3 Percentage of campus ICT incidents resolved within the established targets for high, medium and low criticality

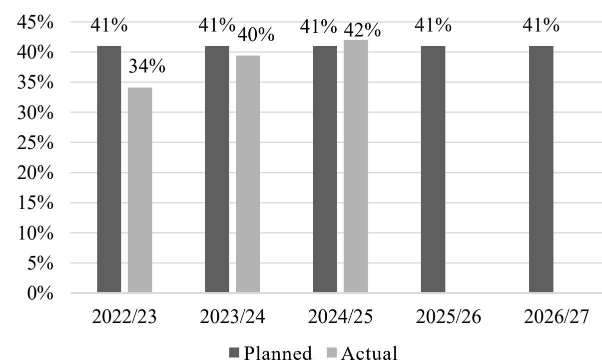


Expected accomplishments	*Indicators of achievement*

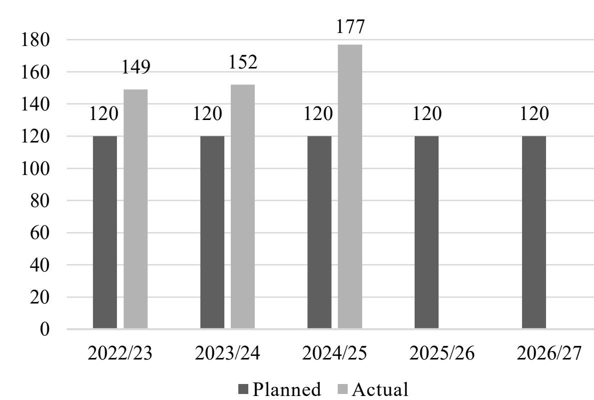
1.2.4 Average annual percentage of authorized international posts vacant, excluding tenant units, within the target range



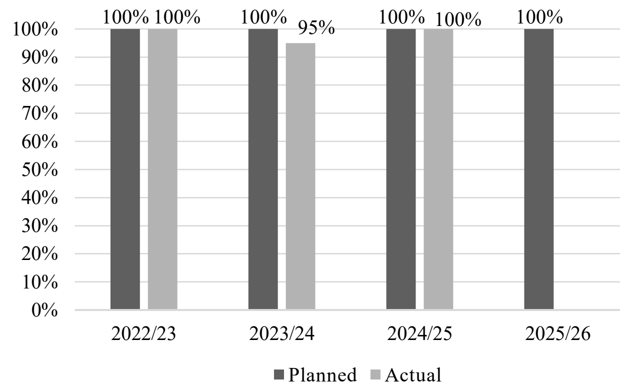
1.2.5 Average annual percentage of female international civilian staff



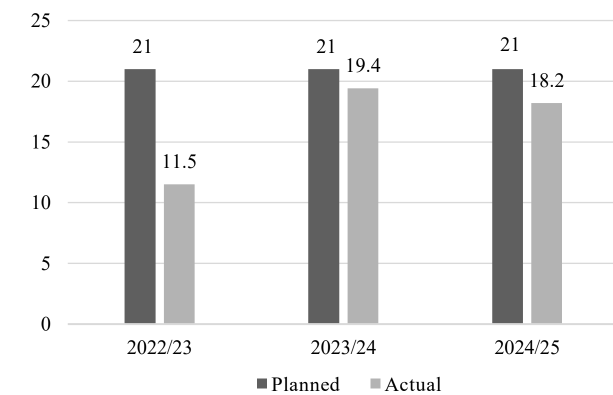
1.2.6 Average number of calendar days of recruitment from posting of the job opening to candidate selection, for international candidates



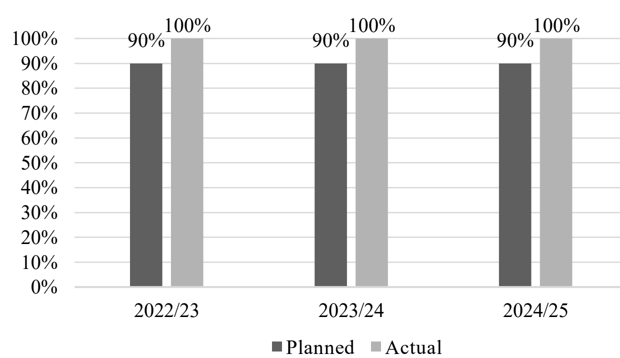
Expected accomplishments	*Indicators of achievement*
	1.2.7 Compliance with the 10 core field occupational safety risk management programme requirements

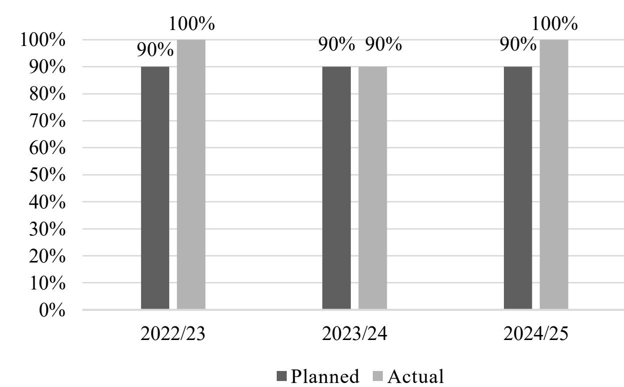


1.3 Policing, rule of law and training support provided by the tenant units to peacekeeping missions and other field operations	1.3.1 Prompt processing of requests for deployment by the Standing Police Capacity (number of days)



1.3.2 Satisfactory accomplishment of agreed terms of reference for deployments by the Standing Police Capacity



Expected accomplishments	*Indicators of achievement*
	1.3.3 Deployment of staff members of the Justice and Corrections Standing Capacity to new, adjusted, or transitioning operations within 30 days of relevant Security Council resolution or request
		1.3.4 Satisfactory accomplishment of agreed terms of reference for deployments of the Justice and Corrections Standing Capacity
	


Evaluation activities

99. The following evaluations completed by the Office of Internal Oversight Services during the 2024/25 period have guided UNLB planning for the 2026/27 period:

(a) Audit of the management of strategic deployment stocks (report 2025/006);

(b) Audit of secure communication and telecommunications activities at UNSOS and support provided by the United Nations Global Service Centre (report 2025/021).

In response to the results of the evaluations referenced above, the Base, in close coordination with the Department of Operational Support, the Department of Management Strategy, Policy and Compliance and other relevant entities, will continue to strengthen its governance and management of the strategic deployment stocks. It will also continue to work with UNSOS and the Office of Information and

Communications Technology to address the recommendations of the Office of Internal Oversight Services on secure communication and telecommunications activities in the mission.

II. Financial resources

A. Overall

(Thousands of United States dollars; budget year is from 1 July to 30 June)

	2024/25 apportionment			2024/25 expenditure			Variance

B. Non-budgeted contributions

100. The value of non-budgeted contributions for the period from 1 July 2024 to 30 June 2025 and 1 July 2026 to 30 June 2027 is as follows:

(Thousands of United States dollars)

Category	*Actual value (2024/25)*	*Estimated value (2026/27)*
Voluntary contributions[a]	8 331.4	8 331.4
Voluntary contributions in kind (non-budgeted)[b]	6 018.4	–
Total	**14 349.8**	**8 331.4**

[a] Represents financial contributions from the Government of Italy for the purpose of improvements to the premises in use by UNLB at the Italian air force base at Brindisi. Includes staff and personnel (2 P-5 and 4 consultants).

[b] Inclusive of office buildings, workshops, warehouses, infrastructure and open spaces provided by the Government of Italy ($3,080,774.2), and office buildings, operational buildings and open spaces provided by the Government of Spain ($2,937,582).

C. Efficiency gains

101. The cost estimates for the period from 1 July 2026 to 30 June 2027 take into account the following efficiency initiatives:

(Thousands of United States dollars)

Budget class	Description of the Initiative	*Estimated efficiency gains (2024/25)* (1)	*Realized efficiency gains (2024/25)* (2)	*Variance (2024/25)* (3)=(2)-(1)	*Investment since inception to generate the efficiency gains of 2026/27* (4)	*Cumulated efficiency gains since inception and before 2026/27* (5)	*Estimated efficiency gains (2026/27)* (6)	*Cumulated investments and efficiency gains as of 2026/27* (7)=(4)+(5)+(6)
External[a]								
Communications and information technology	M-Products: standardized, modular and containerized ICT solutions		1 251.4	1 251.4	–	1 251.4	493.0	1 744.4
Communications and information technology	United Nations Maps: production of high-quality geospatial data and mapping services		264.0	264.0	–	264.0	550.0	814.0
Communications and information technology	Centralized TETRA switch at the Base, substituting units at individual missions		1 928.0	1 928.0	–	1 928.0	1 385.9	3 313.9
Other supplies, services and equipment	Introduction of standardized packaging and labelling of personal protection equipment and accoutrements: cost reduction from $0.194 to $0.043 per item ($1.36 million annual items)						205.4	205.4
Ground transportation	3R programme: refurbishment of 23 additional assets in 2026/27; and 4 assets shipped to UNFICYP and UNSOS in 2024/25		473.0	473.0	–	473.0	2 940.7	3 413.7
Internal								
Consultants, facilities and infrastructure, communications and information technology, and other supplies, services and equipment	Efficiency measures through cost optimization (net reductions under related budget classes)		–	–	–	–	1 916.0	1 916.0
Facilities and infrastructure	Photovoltaic panels to reduce electricity demand from the grid[b]	92.8	–	(92.8)	–	–	–	–
International staff	Conversion of 2 posts from FS-6 to 2 P-2	–	–	–	–		75.0	75.0
Total		**92.8**	**3 916.4**	**3 823.6**	**–**	**3 916.4**	**7 566.0**	**11 482.4**
Approved budget for 2025/26							57 885.7	
2026/27 estimated efficiencies as a percentage of the approved budget for 2025/26							13.0	

[a] These represent savings in the missions’ budgets but are presented in the report on the Base for presentation purposes.

[b] Project was cancelled due to insufficient funds.

D. Unencumbered balance

102. The unencumbered balance for the periods from 2022/23 to 2024/25 as reported in the respective performance reports is as follows:

Trend of the unencumbered balance

(Thousands of United States dollars)

	Amount		
Group	*2022/23*	*2023/24*	*2024/25*
Military and police personnel	–	–	–
Civilian personnel	2 781.4	(2 805.5)	(1 088.5)
Operational costs	(1 118.3)	3 016.6	2 273.7
Total	**1 633.1**	**211.1**	**1 185.2**

E. Cancellation of prior-period obligations

103. Prior-period obligations for the periods from 2022/23 to 2024/25 were cancelled as follows:

Trend of the cancellation of prior-period obligations

(Thousands of United States dollars)

	Amount		
Group	*2022/23*	*2023/24*	*2024/25*
Military and police personnel	–	–	–
Civilian personnel	10.6	8.5	22.7
Operational costs	255.7	441.3	184.8
Total	**266.3**	**449.8**	**207.5**

Note: The amounts represent the total obligations that were cancelled at the end of the 12-month period following the end of the budget period in respect of goods supplied and services rendered in the budget period.

F. Other revenue and adjustments, and borrowing

Other revenue and adjustments

(Thousands of United States dollars)

Category	*Amount*
Investment revenue	783.2
Other/miscellaneous revenue[a]	2 732.4
Voluntary contributions in cash	–
Prior-period adjustments	

Category	Amount
Cancellation of prior-period obligations	207.5
Total	**3 723.1**

[a] Breakdown of other/miscellaneous revenue: refund of prior-period expenses ($41,100); non-spendable revenue for credit return from peacekeeping cost recovery funds reclassified from spendable revenue from prior periods ($2,500,000); and other revenue ($191,300).

104. Credits comprising the unencumbered balances, other revenue and the cancellation of prior-period obligations reduce the assessed contributions owed by Member States in the following financial year. The credit for the 2024/25 period for overall peacekeeping operations amounts to $335.5 million, including the support entities and MINUSMA. In the current financial situation, offsetting this large amount of credit against a future assessment for the 2026/27 period will reduce the collection and undermine the ability of peacekeeping operations to fully implement their mandates. Accordingly, the Secretary-General proposes that the General Assembly approve that the credits in respect of the financial period 2024/25 be placed in a reserve that would be used in the event that collections are insufficient to enable the implementation of those mandates and allow Member States to apply their share towards current or future dues once the Assembly determines that the liquidity situation has sufficiently improved. This proposal is explained in more detail in the peacekeeping overview report.

G. Vacancy factors

105. The cost estimates for the period from 1 July 2026 to 30 June 2027 take into account the vacancy factors outlined in the table below. The table also summarizes, by category, the actual rates in the periods from 2022/23 to 2024/25, as well as the approved and current rates for the 2025/26 period:

(Percentage)

Category	Actual 2022/23	Actual 2023/24	Actual 2024/25	2025/26 approved	Actual as at 31 December 2025	Actual average, January to December 2025	2026/27 proposed
Civilian personnel							
International staff	19.0	11.9	14.7	11.0	17.8	15.4	15.4
National staff							
National Professional Officers	–	–	–	50.0	100.0	100.0	7.3[b]
National General Service staff	6.2	4.9	6.0	4.8	10.4	7.3	7.3
United Nations Volunteers							
International	–	100.0	50.0	–	50.0	50.0	–
National	–	–	–	–	–	–	50.0
Temporary positions[a]							
International staff	50.0	16.7	–	–	–	–	–

[a] Funded under general temporary assistance.
[b] Vacancy rate for a continuing post applied.

106. The assumptions considered for the vacancy factors include the current 12-month average vacancy rate, from January to December 2025, or the actual vacancy rate as

at 31 December 2025. This is in line with the policy guidance provided to improve the accuracy and consistency of the vacancy factors applied in the proposed budgets for the 2026/27 period and to ensure that proposed vacancy rates are based, as much as possible, on actual rates. A vacancy rate of 50 per cent has been applied in the calculation of costs for the proposed conversions.

III. Analysis of variances[2]

	2024/25 variance		*2026/27 variance*	
International staff	$1 406	5.6%	($764.9)	(4.8%)

107. For the 2024/25 period, the reduced requirements were attributable primarily to: (a) the higher actual average vacancy rate of 14.7 per cent, compared with 9.8 per cent in the approved budget, due to the hiring restrictions implemented to address the liquidity situation; and (b) the lower actual common staff costs compared with the rates in the approved budget.

108. For the 2026/27 period, the reduced requirements are attributable primarily to: (a) the abolishment of three international staff posts (2 P-3 and 1 FS-6) due to the application of the scalability staffing model; (b) the application of a higher vacancy rate of 15.4 per cent, compared with 11.0 per cent in the approved budget; (c) a lower rate of common staff costs to net salary of 54.2 per cent, compared with 60.1 per cent in the approved budget; and (d) the proposed reclassification of two FS-6 posts to two P-2 posts.

	2026/27 variance	
National Professional Officer	$56.4	120.3%

109. For the 2026/27 period, the increased requirements are attributable primarily to: (a) the application of the lower (continuing) vacancy rate of 7.3 per cent, compared with 50.0 per cent applied in the approved budget; (b) the application of the exchange rate of 0.863 euros to 1 United States dollar, compared with the rate of 0.948 euros applied in the approved budget; and (c) the application of higher salary rates on the basis of the revised salary rates effective 1 November 2024.

	2024/25 variance		*2026/27 variance*	
National General Service staff	($2 594.8)	(12.7%)	$115.0	0.5%

110. For the 2024/25 period, the increased requirements were attributable primarily to the retroactive salary increase for national staff in Brindisi of 3.8 per cent, promulgated in August 2024 with an effective date of 1 November 2023, that was not known at the time of preparing the budget proposal for the 2024/25 period. This was offset in part by: (a) the fluctuation of the United States dollar against the euro, resulting in actual average exchange rate of 0.920 euros to 1 United States dollar, compared with the rate of 0.912 euros applied in the approved budget for 2024/25; and (b) the slightly higher actual average vacancy rate of 6.0 per cent, compared with 5.9 per cent in the approved budget, due to the implementation of the hiring freeze.

111. For the 2026/27 period, the increased requirements are attributable primarily to: (a) the application of the exchange rate of 0.863 euros to 1 United States dollar, compared with the rate of 0.948 euros applied in the approved budget for the 2025/26

[2] Resource variance amounts are expressed in thousands of United States dollars. Analysis is provided for variances of at least plus or minus 5 per cent or $100,000.

period; (b) the application of higher salary rates on the basis of the revised salary rates effective 1 November 2024; and (c) the redeployment of one G-7 post from Brindisi to Valencia, where the salary costs are higher. The increased requirements are offset in part by: (a) the abolishment of 18 national staff posts as a result of the scalability staffing model and 2 posts due to the closure of the Kuwait Joint Support Office; and (b) the application of a higher vacancy rate of 7.3 per cent, compared with 4.8 per cent applied in the approved budget.

	2024/25 variance		*2026/27 variance*	
United Nations Volunteers	$69.9	92.5%	($20.8)	(20.5%)

112. For the 2024/25 period, the reduced requirements were attributable primarily to the utilization of funds committed in 2023/24 to offset 2024/25 expenditure, as the two volunteers only commenced their assignments in January and February 2025. Consequently, only 7.5 per cent of the allocated budget for 2024/25 was expended.

113. For the 2026/27 period, the reduced requirements are attributable primarily to: (a) the application of a 50.0 per cent vacancy rate due to the proposed conversion of one international United Nations Volunteer position to a national United Nations Volunteer position; and (b) the application of a lower pro forma cost for a continuing international United Nations Volunteer position.

	2024/25 variance		*2026/27 variance*	
General temporary assistance	$29.9	9.3%	$52.2	15.9%

114. For the 2024/25 period, the reduced requirements were attributable primarily to the lower actual common staff costs compared with the rates in the approved budget.

115. For the 2026/27 period, the increased requirements are attributable primarily to the application of zero per cent vacancy rate, compared with 11.0 per cent applied in the approved budget.

	2024/25 variance		*2026/27 variance*	
Consultants and consulting services	$113.1	65.3%	($85.7)	(51.7%)

116. For the 2024/25 period, the reduced requirements were attributable primarily to the liquidity situation, which resulted in only 92.2 per cent of the approved resources under group III (operational costs) being issued by 30 June 2025. As a result, planned consultancies in warehouse software application, innovative research on energy systems, certification for information technology management, formalization of partnership agreements with the host country, climate change and conflict, and fire prevention and safety coordination for construction projects were not implemented.

117. For the 2026/27 period, the reduced requirements are attributable primarily to the reduction in the number of consultancies under administration and campus support, to align resources with operational priorities.

	2024/25 variance		*2026/27 variance*	
Official travel	$141.6	39.6%	($9.6)	(4.2%)

118. For the 2024/25 period, the reduced requirements were attributable primarily to the liquidity situation, which resulted in only 92.2 per cent of the approved resources under group III (operational costs) being issued by 30 June 2025. As a result, the following planned missions were cancelled: (a) on-site prototype inspections to ensure compliance with United Nations technical specifications prior to contract

award and deployment; (b) procurement site and security assessment visits; and (c) Justice and Corrections Standing Capacity assessment missions in the Africa region.

119. For the 2026/27 period, the reduced requirements are attributable primarily to the reduction in the number of training activities involving travel.

	2024/25 variance		*2026/27 variance*	
Facilities and infrastructure	$599.2	9.2%	($343.4)	(5.6%)

120. For the 2024/25 period, the reduced requirements were attributable primarily to: (a) the liquidity situation, which resulted in only 92.2 per cent of the approved resources under group III (operational costs) being issued by 30 June 2025 and the reprioritization of operational resources to cover increased requirements under group II (civilian personnel), leading to the cancellation of planned projects; and (b) lower than planned costs for the installation of a cooling system in the workshop area, resulting from efficiencies in the procurement process. This was offset in part by unplanned expenditure on services for a safety coordinator and the rental of a crane to move containers in the aftermath of the floods in Valencia.

121. For the 2026/27 period, the reduced requirements are attributable primarily to the lower number of planned projects under construction, alteration, renovation and major maintenance and as part of the reduction of discretionary non-post expenditure.

	2024/25 variance		*2026/27 variance*	
Ground transportation	$73.6	16.9%	$102.7	27.8%

122. For the 2024/25 period, the reduced requirements were attributable primarily to: (a) the purchase of one forklift for the regional deployment stocks instead of two as originally planned, owing to higher than estimated costs for material-handling equipment; (b) lower than planned requirements for the rental of vehicles, resulting from reduced training and transfer activities, following the decision of management to mitigate the liquidity challenges by relying on internal UNLB services; (c) reduced power consumption by diesel uninterruptible power supply generators, due to fewer power fluctuations and a lower actual average fuel price of $0.729 per litre during 2024/25 compared with a budgeted average price of $1.101 per litre. This was offset in part by the increased cost of spare parts, due to external repairs and maintenance of the vehicle fleet in the absence of funding for vehicle replacements.

123. For the 2026/27 period, the increased requirements are attributable primarily to: (a) the planned replacement of the obsolete car monitoring system, which has exceeded its 15-year service life and is no longer serviceable by the manufacturer. A new (car log) monitoring system will be acquired and installed on all 126 vehicles in the UNLB fleet to ensure continuity and full alignment with the UNLB centralized fleet data system; and (b) the acquisition of a mobile column lift to support repair and maintenance of the vehicles and trucks for the United Nations reserve and 3R programme.

	2024/25 variance	
Air operations	$2.1	23.4%

124. For the 2024/25 period, the decreased requirements were attributable primarily to the new contract for satellite-based aircraft tracking and monitoring services, under which missions are charged directly, compared with the previous arrangement under the Strategic Air Operations Centre.

125. For the 2026/27 period, due to the transfer of tenant units' budgets, the requirements for air operations under the Strategic Air Operations Centre are presented under the budget for the support account.

	2024/25 variance		*2026/27 variance*	
Communications and information technology	$845.2	6.4%	($1,341.4)	(10.6%)

126. For the 2024/25 period, the reduced requirements were attributable primarily to the liquidity situation, which resulted in only 92.2 per cent of the approved resources under group III (operational costs) being issued by 30 June 2025 and the reprioritization of operational resources to cover increased requirements under group II (civilian personnel). Resources approved for the replacement of communications and information technology equipment were also reprioritized to cover maintenance services for repairs of facilities in Valencia. The reduced requirements were offset in part by: (a) requirements under acquisition of and maintenance service for network equipment; (b) the unplanned professional services for the certification of the Tier-Ready design of UNLB prefabricated modular data centres; and (c) higher expenditure under software licences and fees due to higher than planned costs of data protection software and the unplanned cost of the software for virtual private network infrastructure.

127. For the 2026/27 period, the reduced requirements are attributable primarily to the lower number of communications and information technology equipment planned for replacement, as part of the reduction in discretionary non-post expenditure. The reduced requirements are offset in part by increased requirements for maintenance, attributable primarily to: (a) an increase in the cost of network control services due to higher rates; (b) an increase in costs for the maintenance of software related to the field remote infrastructure monitoring system due to changes in the configuration of services; and (c) the application of an exchange rate of 0.863 euro to 1 United States dollar, compared with the rate of 0.948 euros in the approved budget.

	2024/25 variance		*2026/27 variance*	
Medical	$18.6	25.3%	($19.3)	(27.1%)

128. For the 2024/25 period, the reduced requirements were attributable primarily to: (a) the delay in the establishment of a new local contract for medical supplies, which limited the time for processing planned acquisitions; (b) the acquisition of medical supplies implemented under facilities and infrastructure budget lines due to the nature of expenditure; and (c) a reduced number of medical equipment in the strategic deployment stock requiring maintenance.

129. For the 2026/27 period, the reduced requirements are attributable primarily to lower requirements for the acquisition and rental of medical equipment, in line with expenditure trends from previous years. The reduced requirements are offset in part by increased requirements under medical supplies.

	2024/25 variance		*2026/27 variance*	
Other supplies, services and equipment	$480.3	44.7%	($145.5)	(14.7%)

130. For the 2024/25 period, the reduced requirements were attributable primarily to: (a) the liquidity situation, which resulted in only 92.2 per cent of the approved resources under group III (operational costs) being issued by 30 June 2025 and the reprioritization of operational resources to cover increased requirements under

group II (civilian personnel); and (b) lower than planned freight costs due to a reduction in the purchase of ICT equipment and facilities and infrastructure equipment and supplies.

131. For the 2026/27 period, the reduced requirements are attributable primarily to a lower number of individual contractors for repairs and maintenance, translation services and freight costs related to goods and materials, including information technology equipment. The reduced requirements are also part of the reduction in discretionary non-post expenditure.

IV. Actions to be taken by the General Assembly

132. **The actions to be taken by the General Assembly in connection with the financing of the United Nations Logistics Base at Brindisi, Italy, are:**

(a) **To take note of the unencumbered balance of $1,185,200 with respect to the period from 1 July 2024 to 30 June 2025;**

(b) **To take note of other revenue for the period ended 30 June 2025 amounting to $3,723,100, from investment revenue ($783,200), other/miscellaneous revenue ($2,732,400) and the cancellation of prior-period obligations ($207,500);**

(c) **To approve the apportionment of the amount of $4,908,300 among Member States in accordance with the applicable scale of assessment for 2025 and to place such apportioned amount in a reserve that would be used in the event that collections are insufficient to enable the full, efficient and effective implementation of mandates;**

(d) **To allow Member States to apply their share of the amount apportioned in subparagraph (c) above towards current or future dues once the General Assembly determines that the liquidity situation has improved sufficiently to allow such application;**

(e) **To appropriate the amount of $55,481,400 for the maintenance of the Logistics Base for the 12-month period from 1 July 2026 to 30 June 2027.**

V. Summary of follow-up action taken to implement the decisions and requests of the General Assembly in its resolutions 76/274 and 79/300, including the requests and recommendations of the Advisory Committee on Administrative and Budgetary Questions endorsed by the Assembly

A. General Assembly

Cross-cutting issues

(Resolution 76/274)

Decision/request	*Action taken to implement decision/request*
Requests the Secretary-General to improve comprehensive oversight of the activities of peacekeeping missions and implement the recommendations of relevant oversight bodies in this regard to avoid deficiencies in management and related economic losses, with the aim of ensuring full compliance with the Financial Regulations and Rules of the United Nations (para. 17).	As of November 2025, 9 of the 17 recommendations of the Board of Auditors had been fully implemented (53 per cent) and 8 were under implementation (47 per cent) and expected to be implemented within the agreed time frame. Three OIOS recommendations on the management of the strategic deployment stocks were under implementation and expected to be implemented within the agreed time frame.
Requests that future budget proposals demonstrate the scalability of mission support components, including their staffing and operational costs, be proportionate in relation to the changing level of other mission components and include standard indicators (para. 27).	The staffing model (by function and reference ranges) has been applied to the budget proposal for 2026/27. Based on the application of the model, 21 posts are proposed for abolishment (paras. 81–83 and annex II).

B. Advisory Committee on Administrative and Budgetary Questions

Cross-cutting issues

(A/76/760 and General Assembly resolution 76/274)

Decision/request	*Action taken to implement decision/request*
While the Advisory Committee supports inter-mission cooperation, it notes the continued lack of clear and transparent reporting on the areas of cooperation and the respective financing arrangements and trusts that future overview reports and relevant mission performance reports will provide more comprehensive information on the areas of inter-mission cooperation, including the recording of related resources between the originating and receiving missions (para. 77).	The recommendation is addressed in paragraphs 84 to 87 of the present report.

Financing of the United Nations Base at Brindisi, Italy

(A/79/724/Add.6 and General Assembly resolution 79/300)

Request/recommendation	*Action taken to implement request/recommendation*
The Advisory Committee trusts that information on the status of vacant posts, as well as on the impact of the liquidity situation on projected hirings, will be provided to the General Assembly at the time of its consideration of the present report and in the next budget submission.	The information on vacant posts is reflected in the supplementary information. As a result of the liquidity situation, vacancy rates in the 2024/25 and 2025/26 period have been higher than budgeted.
The Advisory Committee acknowledges the proposed transfer of the budgets of the tenant units and the expected benefits of ensuring consistency and alignment of delegation of authority and functional responsibility in budget presentation. The Committee trusts that clarification of the type of administrative support and services to be provided by the Logistics Base to the tenant units will be provided to the General Assembly at the time of its consideration of the present report, as well as in the next budget submission.	The administrative support services provided to former tenant units is presented in paragraph 76 of the present report. UNLB will continue to support former tenant units by providing administrative services (human resources, finance, procurement and facilities) and common services such as office space, shared facilities, information technology support and routine operational assistance.
The Advisory Committee notes that, under delegated authority, field missions may choose to either procure items commercially or to source them from the strategic deployment stocks. The Committee stresses that priority should be given to sourcing necessary items from existing deployment stocks with a view to minimizing the obsolescence of current assets. The Committee trusts that further clarification will be provided to the General Assembly on the practical implications of the revised concept for strategic deployment stocks and the indication that the stocks will be the default sourcing method for relevant items across missions at the time of its consideration of the present report and in the next budget report.	The implementation of the revised concept of operations for strategic deployment stocks is explained in paragraphs 48 to 53. UNLB will undertake a comprehensive review that will be presented to the General Assembly at its eighty-second session.
The Advisory Committee emphasizes that there is a need to ensure that the acquisition plans and inventory levels of strategic and regional deployment stocks follow a demand-driven approach based on actual operational needs, keeping in mind that in recent years no new field missions have been established, while several have downsized or closed. The Committee trusts that, following the implementation of the revised concept and the gathering of data on its utilization, a comprehensive review of appropriate levels and the cost-effectiveness of the strategic deployment stocks will be undertaken and presented to the General Assembly during its eighty-second session.	
The Advisory Committee looks forward to the presentation of the results on the development of the new scalability model for the Logistics Base in the context of the next budget report.	The results of the scalability review and staffing model are presented in paragraphs 81 to 83 of and annex II to the present report.

Request/recommendation	*Action taken to implement request/recommendation*
The Advisory Committee trusts that future budget and performance reports will include more detailed and comprehensive information on the services provided to various entities, the resources required to provide those services, related posts and positions, the different financing and cost-recovery arrangements, and the recording of related income and expenditure (see also A/78/744/Add.5, para. 42).	This recommendation is addressed in section I.B (Budget implementation), including tables 5 and 10.
The Advisory Committee notes that the pilot project would be evaluated for expansion opportunities, using lessons learned together with a cost-benefit analysis, with a view to establishing additional regional refurbishment centres. The Committee looks forward to receiving an update on the 3R pilot project at the United Nations Mission in South Sudan (UNMISS) for the regional refurbishment and future plans, including information on the types of items to be refurbished regionally and a cost-benefit analysis of the possible expansion of refurbishment centres in the next budget proposal.	Updated information on the 3R pilot project in UNMISS is provided in paragraph 40.
The Advisory Committee notes the efforts of the Base regarding digital transformation initiatives, including enhancing productivity through skills development, which could potentially also affect staffing requirements. The Committee trusts that more information on such efficiencies will be provided in future reports and shared with other Secretariat entities, as appropriate, with a view to strengthening the Organization’s culture of efficiency.	The information is presented in paragraphs 65 and 66 and under section II.C (efficiency gains).
The Advisory Committee trusts that the Base will further pursue its efforts to improve equitable geographical representation and gender parity in the Logistics Base.	The Base will continue to consider geographical representation during the selection process and remains committed to advancing gender parity. Since 1 July 2025, the percentage of international female staff has increased from 41 to 46 per cent.

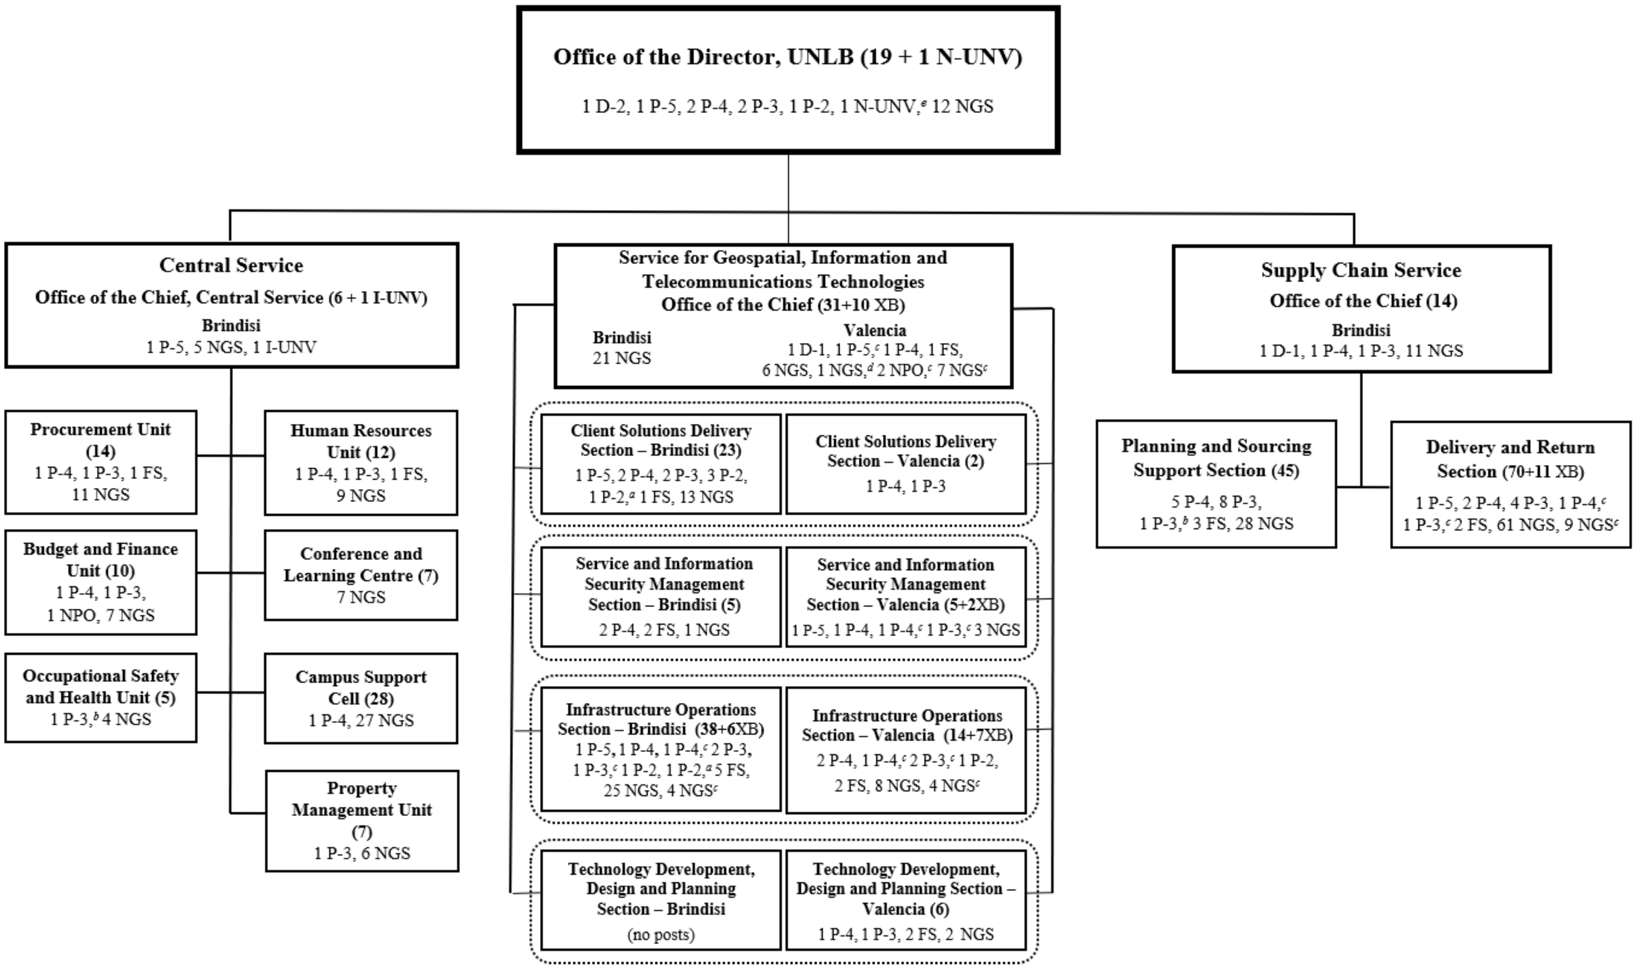
Organization chart

Proposed organizational structure of the United Nations Logistics Base for 2026/27



Abbreviations: FS, Field Service; I-UNV, international United Nations Volunteer; NGS, national General Service; NPO, National Professional Officer; N-UNV, national United Nations Volunteers; XB, extrabudgetary.

[a] Reclassified/reassigned post.
[b] Funded under general temporary assistance.
[c] Financed through extrabudgetary mechanism.
[d] Redeployed post.
[e] Conversion.

Annex II

Review of peacekeeping support functions performed by the United Nations Logistics Base at Brindisi, Italy, and the Regional Service Centre in Entebbe, Uganda

I. Introduction

1. The review of peacekeeping support functions performed by the United Nations Logistics Base at Brindisi, Italy (UNLB), and the Regional Service Centre in Entebbe, Uganda (RSCE), was undertaken in response to legislative requests.[1] It was conducted as an extension of the review of the support account for peacekeeping operations, as a result of which meaningful progress has been made in reviewing scalability and developing a new staffing model (by function and with reference ranges). The review was conducted with the assistance of an experienced external consultancy firm. The General Assembly took note of the related report of the Secretary General (A/79/781) in section II of its resolution 79/298, as recommended by the Advisory Committee on Administrative and Budgetary Questions (A/79/842, para. 43). This model was applied, as part of the UN80 Initiative, to the revised estimates relating to the support account for the 2025/26 period (A/80/400), resulting in the abolishment of 127 posts (due to the staffing model) of the overall 202 posts and positions abolished in the support account.

2. As noted in the review, Base staffing levels grew from 136 posts (including general temporary assistance and United Nations Volunteers) in 2003/04 to 452 posts in 2024/25, while its budget (not adjusted for inflation) grew from $22.0 million in 2003/04 to $69.0 million in 2024/25, roughly in tandem with the peacekeeping budget up to 2014/15. Some of the increase in support capacity went to supporting the greater scale of peacekeeping operations and some went to building core capacities in key areas, including the maintenance of the Base itself and relevant infrastructure, as well as some of the work related to strategic deployment stocks and the United Nations reserve. UNLB staffing levels have remained mostly steady since 2015/16 despite a decreasing trend in the overall peacekeeping budget. UNLB initially provided services to peace operations, funded through a shared service model from the overall United Nations peacekeeping budget. Over time, it has evolved to serve a broader range of clients in line with the principles of the management reform adopted by the General Assembly in 2019 to organize work according to services provided rather than client served, under the management of the Office of Supply Chain Management in the Department of Operational Support.

3. Since RSCE first started to operate as a separate entity for budget purposes in 2016/17, the number of posts (inclusive of general temporary assistance and United Nations Volunteers) has declined slightly, from 421 in 2016/17 to 404 in 2024/25, while the budget (not adjusted for inflation) has grown from $39 million in 2016/17 to $48 million in 2024/25. RSCE already utilizes a transactional scalability model, driven by trends in the number of transactions that it conducts. The Advisory Committee on Administrative and Budgetary Questions has noted that “non-transactional offices”, including the executive direction and management component and the Regional Field Technology Service, are excluded from this transactional scalability model, and indicated that at least “safety and security as well

[1] Recommendations of the Advisory Committee on Administrative and Budgetary Questions contained in A/76/760/Add.5 (UNLB) and A/78/744/Add.6 (RSCE), endorsed by the General Assembly in its resolutions 76/277 and 78/294, respectively, as well as the recommendation of the Board of Auditors in A/78/5 (Vol. II).

as information and telecommunications technology functions could be considered scalable going forward".

II. Methodology

A. Functions

4. Following the methodology used for the scalability review of the support account, the model categorized UNLB operations into three functions: (a) field supply chain; (b) digital technology service delivery, covering the Service for Geospatial, Information and Telecommunications Technologies; and (c) management – UNLB, comprising the Central Service and the Office of the Director. In the case of RSCE, the existing transactional scalability model continues to be applied, while the new staffing model is being applied to the non-transactional functions, namely management and security and field technology services.

Table 1
Support functions in the Logistics Base and corresponding organizational units

Support function	*Organizational units*
Management – UNLB	Office of the Director
	Central Service
Field supply chain	Supply Chain Service
Digital technology service delivery	Service for Geospatial, Information and Telecommunications Technologies

Table 2
Support functions in the Regional Service Centre and corresponding organizational units

Support function	*Organizational units*
Management and security – RSCE	Office of the Director
	Office of the Deputy Director (excluding tier 2B)
Field technology services	Regional Field Technology Service

5. The review built on the approach developed for the review of the support account, which, like UNLB and non-transactional functions in RSCE, conducts work that cannot be divided into transactions. The approach was designed to capture the full scope of work supporting peacekeeping, special political missions, other missions and activities by analysing data on how effort is allocated across organizational units and all posts and positions, including contractors. The approach produces, for each support function, a reference range formula describing how staffing requirements should be expected to change, taking into account changes in peacekeeping and special political missions supported. The reference range formulas provide clear definitions of scalability that can be used to guide the budget formulations. At the same time, these formulas allow for differences by function, avoiding

oversimplification of approaches, such as assuming that support function budgets should be a fixed proportion of the peacekeeping budget. Furthermore, the formulas are expressed as ranges, rather than single numbers, reflecting the uncertainty inherent in functions that are not transactional in nature and providing a degree of flexibility for proposing budgets while still having guidelines.

6. The data analysis and calculations are undertaken in three main steps:

(a) Estimating the distribution of support staffing, by purpose and by workload driver, based on triangulation and analysis of workload data from interviews, surveys, organizational charts and other documentation;

(b) Estimating the amount of current support that is (i) dedicated or allocable to peacekeeping operations and (ii) dedicated to or allocable to special political missions;

(c) Determining primary drivers of support requirements and devising reference ranges for how support requirements should change with (i) changes in the scale of operations and (ii) other workload drivers, and a set of reference ranges for support allocable to peacekeeping operations and special political missions combined.

B. Reference ranges

7. The formula for each function for support staffing for peacekeeping and special political missions starts with the total number of full-time equivalents allocable to peacekeeping and special political missions plus appropriate allocations from cross-cutting support to the Secretariat and/or all field missions and administrative and management support for the function itself. As opposed to the formula used in the support account, special political mission client missions are also taken into account as drivers to measure workload functions for UNLB and RSCE, except for management functions, which do not provide direct services to missions.

8. The staffing allocable to peacekeeping and special political missions is broken down into three components: (a) those driven by the scale of operations supported, (b) those driven by other factors and (c) minimum capacity requirements, using the distribution of support work by workload driver (see appendix I). The review showed that approximately 50 per cent of overall capacity requirements for UNLB and RSCE are driven by the scale of operations.

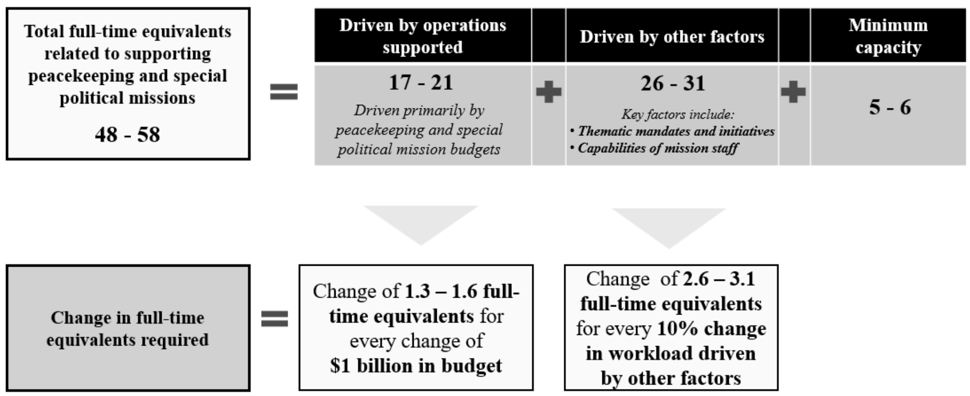
9. Next, the formula describes how the total number of full-time equivalents required for support for peacekeeping and special political missions should change for each component.

10. To illustrate how the reference range model would be used in practice, using a fictional function, the top line in figure I below shows that, for this function, the full-time equivalent of its current staffing resources (between 48 and 58) is focused on support for peacekeeping and special political missions. Of these resources, the workload of between 17 and 21 full-time equivalents is driven by the scale of operations. In addition, the workload of between 26 and 31 full-time equivalents is driven by other factors, while the workload of 5 to 6 full-time equivalents is driven by management support of the function itself.

11. In this example, the primary driver of the work that is dependent on the scale of operations is the total budget for peacekeeping and special political missions, while the other workload of the function is dependent on surge events and the complexity of processes. A formula provided for the change in each category can be used to determine that each increase or decrease in the total budget for peacekeeping and special political missions by $1 billion may require a change of between 1.3 and 1.6 full-time equivalents. Correspondingly, every 10 per cent change in the function's

work-related surge events and complexity of processes may result in changes of between 2.6 and 3.1 full-time equivalents.

Figure I
Illustrative example of a reference range formula for support for peacekeeping and special political missions, for a fictional function



12. The breakdown of the reference ranges and the individual workload drivers for all functions, including an indication of the changes in full-time equivalents that would be required as a result of changes across categories of workload drivers, is contained in appendix II.

III. Support staffing allocable to peacekeeping and special political missions

13. The distribution of support staffing by purpose was estimated for each function considered. Purposes have been aggregated into five primary categories: peacekeeping; cross-cutting; special political missions; non-peacekeeping/special political missions; and management and administration.

14. Support allocable to peacekeeping and special political missions includes specific support work to each category, plus an appropriate allocation, for each support function, of: (a) the capacity devoted to cross-cutting support for the Secretariat and/or all field missions and (b) the management and administration of support functions.

15. The findings show that, for UNLB, a portion of full-time equivalents is dedicated to supporting non-peacekeeping and special political missions, while none of the posts and positions are funded from special political missions or regular budgets, highlighting the funding misalignment.

16. The review contained a recommendation that UNLB and RSCE should maintain single budgets that are funded by appropriate allocations to the budgets for peacekeeping missions and for regular and special political missions, which is currently the approach taken for RSCE.

IV. Identifying prior-year reductions

17. For UNLB and RSCE (non-transactional support), the staffing model will be applied from the 2026/27 budget period, as stated in the relevant budget reports (A/79/767 and A/79/751). Similar to the support account, the 2020/21 budget period was selected as the most suitable baseline line year, based on the closure of the

African Union-United Nations Hybrid Operation in Darfur and the United Nations Multidimensional Integrated Stabilization Mission in Mali and the assumption that it does not account for any other changes to the scale of peacekeeping operations.

18. For UNLB, the calculations of reductions based on the application of the baseline year were offset against reductions already made since the 2020/21 period. Reductions already made for UNLB between 2020/21 and 2025/26 relate to changes due to the scale of operations under field supply chain services and digital technology service delivery, for a total of 23 positions, including 20 contractors.

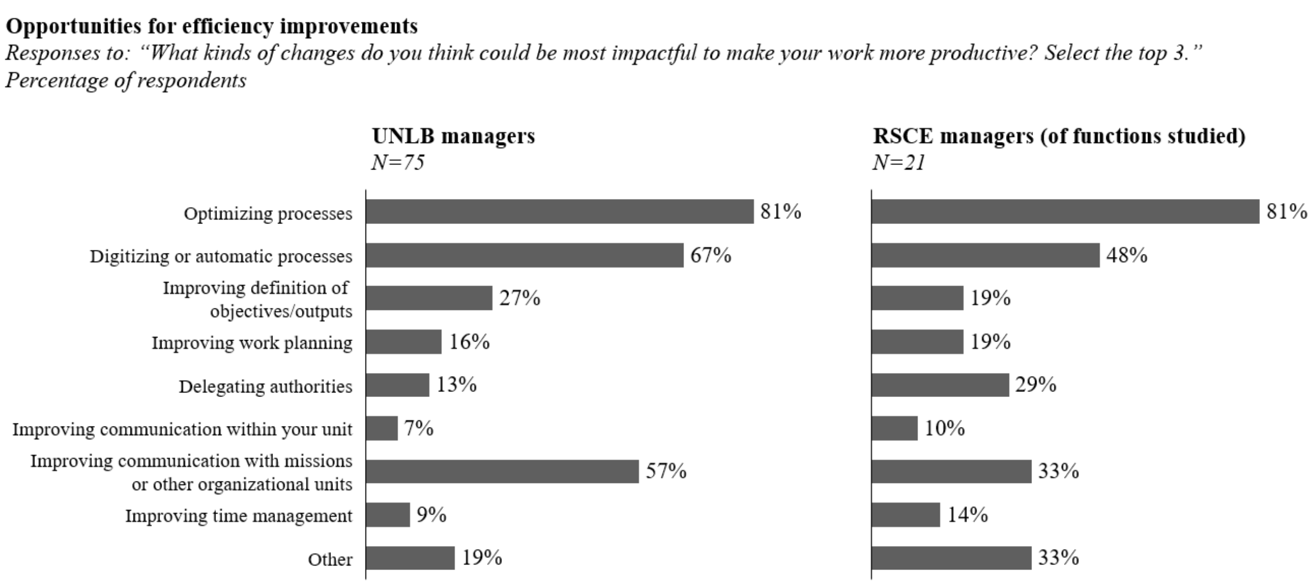
19. There were no reductions for RSCE between the baseline year and 2025/26 in staffing relevant to non-transactional work.

V. Observations about enhancing effectiveness and efficiency

Feedback from managers of the Logistics Base and the Regional Service Centre

20. The feedback from UNLB managers highlighted the areas for efficiency improvements as shown in figure II below. The consultant noted in the report that some of the interventions had already been implemented to varying degrees. In addition, it is worth noting that the Secretariat has been firmly committed to strengthening the culture of efficiency in support entities, including UNLB and RSCE. In the 2023/24 period, UNLB and RSCE efficiency gains amounted to $0.4 million and $4.9 million, respectively. For the 2024/25 period, efficiency gains (estimated) were $3.9 million for UNLB and $3.5 million for RSCE. For the 2026/27 period, the projected efficiency gains are in the range of $7.6 million for UNLB and $8.2 million for RSCE.

Figure II
Efficiency improvement areas identified in surveys of managers for all support functions in the Logistics Base and support functions studied in the Regional Service Centre



VI. Recommendations from the consultant

21. The consultant provided the following recommendations for UNLB and RSCE:

(a) Maintain single budgets for UNLB and RSCE and charge an appropriate allocation to both the peacekeeping and regular budgets for the UNLB budget, as is already done for the RSCE budget, to address current mismatches between work and funding sources and support a functional and service-based delivery model;

(b) Use the reference range formulas as a tool in developing assessed budgets for support functions. Use those formulas appropriately in conformity with guidelines;

(c) Conduct an independent and objective assessment of the appropriateness of absolute staffing levels in support functions. The review includes a recommendation that there should be an independent and objective assessment of what absolute staffing levels are appropriate, i.e. sufficient to meet support requirements and not in excess of requirements, for each support function. Another way to view the purpose of an objective assessment of absolute staffing levels is that it should determine whether, for each support function, the current year should be treated as the "baseline year", or if some prior year in which support capacity was appropriate to the larger scale of operations at the time should be used instead;

(d) Consider the suggestions for opportunities for efficiency improvements identified by functions in UNLB and RSCE.

VII. Implementing the staffing model for 2026/27 (by function and with reference ranges)

22. The proposed 2026/27 budget for UNLB and RSCE applied the staffing model based on the methodology described in section III of the present annex. The process followed a sequence of defined steps, as outlined below, for the respective functions under both entities (see tables for complementary details):

Step 1

Gross reduction targets were calculated by function, using only the scale-of-operation drivers, except for the management function, which took into consideration other workload drivers due to the increasing presence of non-UNLB personnel in the context of UN80 Initiative relocations from New York to Brindisi and Valencia. The baseline period used was 2020/21, compared with the 2026/27 projected budget and revised estimates for the support account and special political missions, including a transfer of payroll to the Department of Operational Support and the anticipated closure of the United Nations Assistance Mission for Iraq, approved by the General Assembly in its resolution 80/243. The projected 2026/27 peacekeeping budget takes into account the reduction in the budget and staffing of 10 per cent as assessed at the time of budget formulation, as well as the new United Nations Support Office in Haiti.

Step 2

For each function, the midpoint within the range of full-time equivalent changes was selected. For example, if the range was 2.5 to 3.5, the target reduction was set at 3.

Step 3

Net reduction targets were then derived by subtracting reductions already implemented since 2020/21 from the gross reduction targets.

Step 4

Each entity selected posts and positions for abolishment in order to meet the function- and entity-level targets identified in steps 2 and 3.

Table 3
Application of the staffing model by function for the Logistics Base

	Steps 1 and 2	*Step 3*	*Step 4*
Function	*Gross reduction targets*	*Reduction since 20/21*	*Net reduction required*
Management – UNLB (Office of the Director and Central Service)	(2)	–	(2)
Field supply chain	(18)	2	(16)
Digital technology service delivery	(24)	21	(3)
Total change	**(44)**	**23**	**(21)**

Table 4
Application of the staffing model, by function, for the Regional Service Centre

	Steps 1 and 2	*Step 3*	*Step 4*
Function	*Gross reduction targets*	*Reduction since 20/21*	*Net reduction required*
Management and security – RSCE (Office of the Director and Office of the Deputy Director, excluding tier 2B)	5	–	5
Field technology services	(5)[a]	–	(5)
Total change	**–**	**–**	**–**

[a] Reductions under Field Technology Services include 4 posts and 1 contractor.

23. While the Secretariat concurs with the consultant’s recommendation for charging a portion to special political missions by maintaining a single budget for UNLB, the implementation of this recommendation will be deferred to future periods, taking into account the ongoing significant changes in the scale and scope of peacekeeping and special political missions and any lessons learned from the utilization of the model.

Appendix I

Figure 1
Distribution of support work, by workload driver, for all functions in the Logistics Base

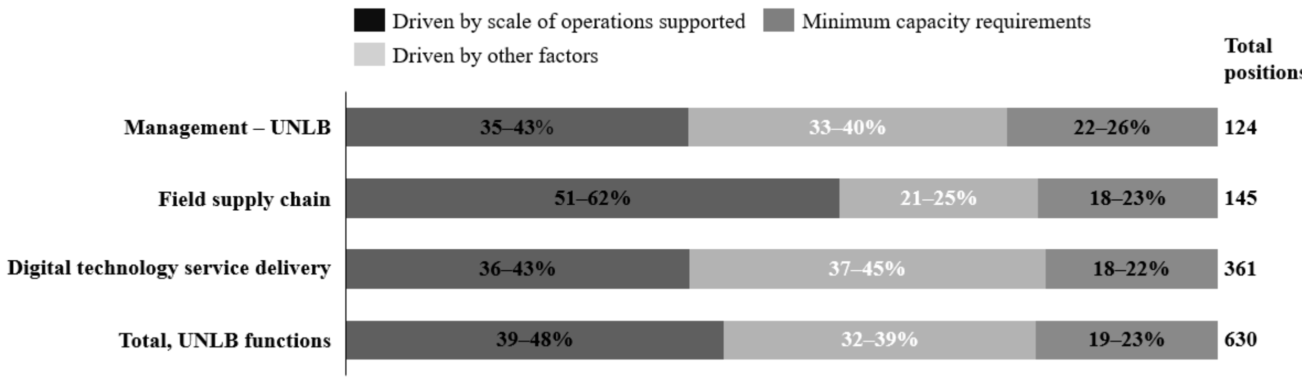


Figure 2
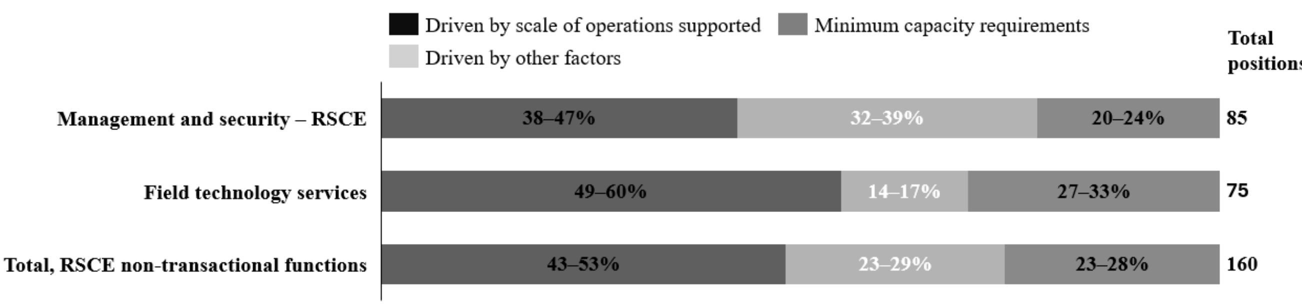
Distribution of support work, by workload driver, for functions studied in the Regional Service Centre



Appendix II

Reference range for all support functions in the Logistics Base and the Regional Service Centre

Table 1
Reference range formulas for changes in support staffing for both peacekeeping and special political missions for all support functions in the Logistics Base

Function	*Full-time equivalents related to supporting peacekeeping and special political missions*	*Full-time equivalents dependent on scale of peacekeeping and special political missions*	*Primary scale driver(s)*	*Dependence of support staffing on primary scale driver(s)*	*Full-time equivalents dependent on other factors*	*Leading other factors driving workload*	*Dependence of support staffing on workload changes due to other drivers*	*Minimum capacity requirements (full-time equivalents)*
Management – UNLB	84–102	33–40	UNLB personnel (including tenant units)	0.6–0.8 full-time equivalents per change of 10 personnel	31–37	• Surge events (e.g. mission start-up or drawdown) • Complexity of internal processes • Internal initiatives	3.1–3.7 full-time equivalents for every 10% change in workload	20–25
Supply chain: Field supply chain	106–129	60–73	Peacekeeping and special political mission (cluster III + UNAMA + UNAMI) budgets	8.5–10.4 full-time equivalents per change of $1 billion in budget	24–29	• Surge events requiring logistical support • Development of new products and services	2.4–2.9 full-time equivalents for every 10% change in workload	22–27
Digital technology service delivery	237–289	62–75	Peacekeeping and special political mission (cluster III + UNAMA + UNAMI) budgets	8.8–10.7 full-time equivalents per change of $1 billion in budget	97–118	• Development of new products and services • Number of applications hosted, geographic information system products offered, cloud instances, and others • Surge events (e.g. mission start-up and liquidation) • Level of demand from client entities	9.7–11.8 full-time equivalents for every 10% change in workload	47–57
		32–39	Number of peacekeeping missions and special political missions (cluster III + UNAMA + UNAMI)	1.2–1.5 full-time equivalents per change of 1 peacekeeping or special political mission				

Abbreviations: UNAMA, United Nations Assistance Mission in Afghanistan; UNAMI, United Nations Assistance Mission for Iraq.

Table 2
Reference range formulas for changes in support staffing for both peacekeeping and special political missions for all support functions studied in the Regional Service Centre

Function	*Full-time equivalents related to supporting peacekeeping and special political missions*	*Full-time equivalents dependent on scale of peacekeeping and special political missions*	*Primary scale driver(s)*	*Dependence of support staffing on primary scale driver(s)*	*Full-time equivalents dependent on other factors*	*Leading other factors driving workload*	*Dependence of support staffing on workload changes due to other drivers*	*Minimum capacity requirements (full-time equivalents)*
Management and security – RSCE	65–80	28–34	RSCE personnel (including tenant units)	0.6–0.8 full-time equivalents per change of 10 personnel	23–29	• Initiatives from senior management • Surge events (e.g. mission liquidation and security situations) • Capabilities in missions	2.3–2.9 full-time equivalents for every 10% change in workload	14–17
Field technology services	32–39	9–11	Budget for African peacekeeping and special political missions served, and the United Nations Office to the African Union	1.7–2.1 full-time equivalents per change of $1 billion in budget	5–6	• Complexity of processes • Level of demand from client entities	0.5–0.6 full-time equivalents for every 10% change in workload	10–12
		8–10	RSCE personnel (including tenant units)	0.2–0.2 full-time equivalents per change of 10 personnel
